I can get you off the hook once you are done with this process.

- ① clean
- ② free
- ③ involved
- ④ exposed

문 4.

You'd better not say anything to the owner of the building about painting your apartment. If I were you, I'd let sleeping dogs lie. The last time you asked him to do some repairs, he raised your rent.

- ① be fortunate
- ② try very hard
- ③ not make troubles
- ④ take it or leave it

문 5. 밑줄 친 부분 중 어법상 옳지 않은 것은?

John took carefully notes of all the presentations throughout the conference, to be able to refer to them later.

- ①
- ②
- ③
- ④

문 6. 다음 문장 중 어법상 옳지 않은 것은?

- ① It is foolish for you to do such a thing.
- ② He ordered that it be done at once.
- ③ I was really amazed when I was offered the job.
- ④ The heavy rain kept them from going on a picnic.

문 7. 다음 우리말을 영어로 가장 잘 옮긴 것은?

이삼십 년 동안 매일 아침 면도를 하다 보면, 누구나 무언가를 배우기 마련이다.

- ① All men can shave every morning for twenty or thirty years without learning something.

문 9. 밑줄 친 부분 중 글의 전체적 흐름에 맞지 않는 문장은?

Given the general knowledge of the health risks of smoking, it is no wonder that the majority of smokers have tried at some time in their lives to quit. ① But in most cases their attempts have been unsuccessful. People begin smoking, often when they are adolescents, for a variety of reasons, including the example of parents and pressure from peers. ② The installation of smoke detectors in buildings is required by law. ③ If others in one's group of friends are starting to smoke, it can be hard to resist going along with the crowd. ④ Once people start smoking, they are likely to indulge in it.

※ 다음 글의 빈 칸에 들어갈 말로 가장 적절한 것을 고르시오.

[문 10 ~ 문 12]

문 10.

Many years of trying to help people with every kind of trouble have left me with one sure conviction: The difficulty could have been overcome or might never have arisen if the people involved had just treated one another with common courtesy. "It's not so much what my husband says," a tearful wife tells me, "as the way he says it. Why does he have to yell at me?" A grim-faced office worker mutters, "I hate my boss. He never shows appreciation for anything." Human beings _____ courtesy. Courtesy, politeness, good manners — call it what you will — the supply never seems to equal the demand.

- ① hunger for
- ② are overfed with
- ③ behave well with
- ④ are satisfied with

문 11.

In Africa, people are sadder about the death of an old man than about that of a newborn baby. The old man represented a wealth of experience that might have benefited the tribe, whereas the newborn baby had not lived and could not even be aware of dying. _____, people in Europe are sad about the death of the newborn baby because they think he might well have done wonderful things if he had lived. They, however, pay little attention to the death of the old man, who had already lived his life anyway.

- ① After all ② As a result
③ By any means ④ On the other hand

문 12.

When listening to operas, you must remember that opera is a special kind of theater. Just as ability to understand the spoken word is necessary if you are to comprehend a play, you cannot fail to profit by the knowledge of the words of opera. It is inconceivable that one should attend a performance of a Shakespearean tragedy, for example, simply for a view of the stage pictures and the beauty of the sound of the actors' voices. If opera is theater and the words are important, what part, then, does music play in an opera?

Music begins where the word ends to communicate expression beyond the power of words.

- ① Music plays an important role in tragic plays.
② Actors are often sensitive to their emotions.
③ Music in an opera adds a new dimension to the word.
④ Opera singers tend to have different tastes for music.

문 13. 다음 글을 쓴 목적으로 가장 적절한 것은?

I was extremely sorry to hear of your disappointment. It was a very hard luck, and you were so near to getting the job. You had worked hard and deserved success, and no one can do more. However, I know you have too much grit to let a thing like this unduly depress you. Wipe out all thought of it and have another try — that's the only sensible thing to do. I know your luck will turn soon, so don't be depressed about it. Are you doing anything Wednesday night? If not, give me a ring, and we might fix up a night out together.

- ① to report ② to relieve
③ to complain ④ to forgive

문 14. 다음 주어진 글에 이어질 순서로 가장 적절한 것은?

Dogs are considered by many to be "man's best friend." They are considered loyal, loving, and courageous members of the family. But at what cost?

- (A) Added to this caring cost is the social cost of canine aggression. In one year, insurance companies in the United States paid 250 million dollars to victims of dog attacks.
- (B) Every year, people in the United States spend more than five billion dollars on dog food and seven billion dollars on veterinary care for their canine pets.
- (C) When other costs are included, experts estimate that aggressive dogs cost society one billion dollars a year.

- ① (A) — (C) — (B)
② (A) — (B) — (C)
③ (B) — (A) — (C)
④ (C) — (A) — (B)

문 15.

Is it possible to construct machines that will talk and understand speech? As early as the 18th century, attempts were being made to devise ways of mechanically reproducing human voices. The Austrian inventor, Wolfgang von Kempelen (1734 ~ 1804), built one such machine, consisting of a pair of bellows to produce air flow, and other mechanisms to simulate parts of the vocal tract. Alexander Bell (1847 ~ 1922) also constructed a 'talking head', made out of various synthetic materials, that was able to produce a few distinct sounds. Modern techniques have led to massive progress in this field. It is no longer necessary to build physical models of the vocal tract. Sound waves can be generated electronically by synthesizing the different components of the sound waves.

- ① Efforts were made to replicate human speech sounds in the 18th century.
② Kempelen devised mechanisms to simulate human vocal parts.
③ Bell's 'talking head' was made out of a variety of artificial materials.
④ It is still important to construct physical models of human articulators.

문 16.

Sputnik I, the first manmade object to orbit the earth, was launched on October 4, 1957. With its launch, the space race was officially begun! The satellite was not much more than a spider-like metal sphere with four external antennae. It contained no scientific instrument other than a small radio transmitter. But Sputnik I, whose name literally means 'traveler', was launched much to the disbelief and shock of the world. Bold claims were made by critics of the day who averred that Russian technology wasn't advanced enough to perform such a feat and therefore the project was a fake. However, those voices were quickly silenced when radio transmissions from the satellite were heard days later.

- ① Sputnik I looked like a spider.
- ② Sputnik I contained a radio transmitter.
- ③ The early Russian success in space made people stunned.
- ④ The world's disbelief in Sputnik I lasted for a long time.

문 17. 다음 글의 주제로 가장 적절한 것은?

Beginning at breakfast with flying globs of oatmeal, spilled juice, and toast that always lands jelly-side down, a day with small children grows into a nightmare of frantic activity, punctuated with shrieks, cries, and hyena-style laughs. The very act of playing turns the house into a disaster area: blankets and sheets that are thrown over tables and chairs to form caves, miniature cars and trucks that race endlessly up and down hallways, and a cat that becomes a caged tiger, imprisoned under the laundry basket. After supper, with more spilled milk, uneaten vegetables and tidbits fed to the cat under the table, it's finally time for bed. But before they fall blissfully asleep, the children still have time to knock over one more bedtime glass of water, jump on the beds until the springs threaten to break, and demand a last ride to the bathroom on mother's back.

- ① the crazy daily life of parents with small children
- ② difficulties of choosing what to eat for each meal
- ③ the importance of children's learning good table manners
- ④ necessities for the early treatment of hyperactive children

문 18. 다음 글의 제목으로 가장 적절한 것은?

Although I learned to speak Danish while I was in Denmark, the accent was difficult to master. When I ordered tea and toast in a restaurant, invariably I received tea and a cheese sandwich. I practiced diligently, and I took special care one day to explain that I wanted toast — I did not want a cheese sandwich, just toast. I asked if the waiter understood. "Yes, yes," he assured me. He soon returned and placed triumphantly before me a toasted cheese sandwich.

- ① Language Barriers
- ② Treating Customers
- ③ How to Teach Danish
- ④ Ways of Ordering Toast

문 19. 다음 대화의 빈 칸에 들어갈 말로 가장 적절한 것은?

A: Tim, we have a staff meeting around four, don't we?
 B: You're right. I'm glad you reminded me. I almost forgot.
 A: Do you have any idea what's on the agenda today?
 B: I think that we're dealing with new strategies for raising sales figures.
 A: _____
 B: Me too. I thought last week's meeting was never going to end.

- ① Did you see all those data at the last meeting?
- ② I guess we are out of time. Don't you think so?
- ③ I hope the meeting doesn't drag on like last time.
- ④ I feel like most decisions at the last meeting were too hasty.

문 20. 다음 두 사람의 대화 내용이 가장 어색한 것은?

- ① A: Hi, Ted! Glad to see you. Is this seat taken?
 B: No, help yourself.
- ② A: I'd like to invite you to a party this Friday.
 B: Thanks for your invitation. I'd love to come.
- ③ A: Oh! Do I have to dress up?
 B: Come as you are.
- ④ A: Could you save my place, please?
 B: I appreciate your cooperation.

You should have brought _____ to children how to use their allowance.

A rise in pay was nothing to write _____ about.

- ① attic ② base
③ ground ④ home

문 6. 밑줄 친 부분 중 어법상 옳지 않은 것은?

If women are dissatisfied ① with always being in the listening position, the dissatisfaction may be mutual. ② What a woman feels she has been assigned the role of silently listening audience ③ does not mean that a man feels he has consigned her ④ to that role — or that he necessarily likes the rigid alignment either.

※ 밑줄 친 부분에 들어갈 말로 가장 적절한 것을 고르시오. [문 7 ~ 문 8]

문 7.

Experts say compulsive _____ usually have trouble categorizing items, find it difficult to make decisions, and worry that objects not in sight will be forgotten. They might leave clothes on top of a bureau, for example, instead of putting them in drawers. Over some time, a few items piled here and there grow into mountains of dangerous clutter.

- ① gluttons ② hoarders
③ philatelists ④ shoplifters

문 8.

When you are passed over for a promotion or when a coworker who you think is a friend goes to lunch with the manager who is trying to sabotage your project, you probably fantasize about how great life would be if you didn't have to make money for a living. But many people choose to work even when their incomes are not essential because work satisfies many of their psychological needs. _____ is one of the best ways to beat the blues.

- ① Balanced living ② Meaningful work
③ Having a true friend ④ Longing for promotion

문 9. 다음 글의 제목으로 가장 적절한 것은?

Luigi Galvani (1773 ~ 1798) was an Italian physician who performed experiments on frogs' legs in an attempt to prove that muscles generate electricity when they contract. It turned out that the opposite is true (muscles contract when stimulated with an electric current), but because of Galvani's work, several words that relate to electricity have been derived from his name. For example, galvanometer is an instrument that measures small electric currents. A galvanic cell is an electric battery cell that cannot be recharged.

- ① Luigi Galvani's Life
② Experiments on Frogs' Legs
③ The Function of an Electric Current
④ The Origin of the Words Related to Electricity

[문 10 ~ 문 11]

문 10.

Olive oil _____, scientists say. An ingredient in olives known as oleocanthal works in much the same way as the drug ibuprofen to suppress pain-causing prostaglandins in the body. The anti-inflammatory properties of oleocanthal may help explain the reduced incidence of certain cancers, stroke, and heart disease in Mediterranean populations that traditionally use large amounts of olive oil in their diets.

- ① can replace the existing oil
② contains a natural painkiller
③ prevents men from being fat
④ can be used as a future energy

문 11.

Most of the people who settled the United States were poor. The country they came to was a wilderness. Land had to be cleared of trees in order to make farms; mines had to be developed; houses, shops, and public buildings had to be built. Everyone had to help build them. _____. Later, it was the man who worked with his head to achieve success in business and industry who was looked up to. Now there is in America a curious combination of pride in having risen to a position where it is no longer necessary to depend upon manual labor for a living and genuine delight in what one is able to accomplish with one's own hands.

- ① Manual labor was highly valued
- ② Constructors ran out of materials
- ③ The majority of families couldn't afford servants
- ④ All elements of society strived for equal treatment

문 12. 다음 글에서 강조하는 북극여우 털의 용도로 가장 적절한 것은?

The lush coat of the arctic fox does more than keeps it warm in frigid temperatures. It helps protect the species from becoming a polar bear's snack. Foxes often trail the mighty bears, hoping for leftovers from a kill. Their thick white fur—a seasonal color change from warmer weather's brown and cream—makes it harder for the bear to find them in snow-covered surroundings.

- ① Glamour ② Insulation
- ③ Camouflage ④ Transformation

문 13. 밑줄 친 부분에 공통으로 들어갈 말로 가장 적절한 것은?

Perceptions are _____. A single oak tree may seem large compared to a person, though it is small compared to the average redwood tree. In other words, things in nature are large or small, and new or old, according to the measure and the comparison involved. In view of this, it is easy to understand why time is _____. A minute seems like a long time to a person sitting on a hot stove, though it is nothing in terms of the average human life. Similarly, this life time is a passing moment in the history of the universe.

- ① absolute ② limited
- ③ relative ④ measurable

문 14. 밑줄 친 부분에 들어갈 말로 가장 적절한 것은?

As early as the stage when human groups subsisted wholly by gathering and hunting, they were already making a strong imprint on the landscape. Their chief agent in doing so was fire. Fire is self-generating: its heat causes further material to ignite. As long as fuel and air are present, the fire will continue to burn and spread. Once human groups came to possess fire, therefore, they were in a position not only to prolong the burning of a single fire but also to reproduce it, to use it for making other fires. In a way, the very word fire is ambiguous and somewhat misleading, since it may refer both to a fire—a singular, isolated event—and to fire in general—a process that occurs over and over again. The point is that with a fire people could continually make more fires. Their control of fire enabled them _____. And this is what they did. Going from place to place, they would light a campfire wherever they decided to stay.

- ① to proliferate fire
- ② to keep a single fire
- ③ to improve their mobility
- ④ to develop entertainment

문 15. 다음 글의 내용과 일치하지 않는 것은?

Many people rely on social security checks every month. During their working years, employees contribute a certain percentage of their salaries to the government. Each employer also gives a certain percentage to the government. When people retire, they receive this money as income. These checks do not provide enough money to live on, however, because prices are increasing very rapidly. Senior citizens, those over age 65, have to have savings in the bank or other retirement plans to make ends meet. The rate of inflation is forcing prices higher each year. The government offers some assistance, medicare (health care) and welfare (general assistance), but many senior citizens have to change their lifestyles after retirement. They have to spend carefully to be sure that they can afford to buy food, fuel, and other necessities.

- ① Social security checks do not meet the growing expenses.
- ② The government does not offer enough medicare and welfare.
- ③ Many senior citizens can maintain their lifestyles after retirement.
- ④ Both employees and employers contribute some money for social security.

문 16. 다음 글의 내용과 일치하는 것은?

Human beings have been producing wealth for millennia, and despite all the poverty on the face of the planet, the long-term reality is that we, as a species, have been getting better at it. If we hadn't, the planet would not now be able to support nearly 6.5 billion of us. We wouldn't live as long as we do. And, for better or worse, we shouldn't have more overweight people than undernourished people on earth—as we do. We've achieved all this, if we want to call it an achievement, by doing more than inventing plows, chariots, steam engines and Big Macs. We did it by collectively inventing a succession of what we have been calling wealth systems. In fact, these are among the most important inventions in history.

- ① Morality is considered more important than wealth.
- ② We should be in good shape in the modern society to be healthy.
- ③ In spite of continuous effort, we seldom solve the issue of the poverty.
- ④ We can manage to support our population on earth through wealth systems.

실험실에 불빛이 하나도 없는 것을 보니 그들은 분명히 일찍 떠났을 것이다.

- ① As there were no lights in the laboratory, they must be left early.
- ② Since there were no lights in the laboratory, they would be left early.
- ③ Since there were no lights on in the laboratory, they must have left early.
- ④ As there were no lights on in the laboratory, they should have left early.

문 18.

재활용 종이를 사용할 때마다, 숲 속의 나무를 보존하게 되면서, 나무는 공기를 정화시키고 지구온난화 가스가 축적 되는 것을 막을 수 있다.

- ① Whenever you use recycling paper, you preserve trees in the forests, trees purify air and stop global-warming gas to pile up.
- ② Whenever you use recycled paper, you preserve trees in the forests that trees purify air and prevent global-warmed gas from piling up.
- ③ Every time you use recycled paper, you preserve trees in the forests, which they can clean the air and keep global-warmed gas from building up.
- ④ Every time you use recycled paper, you preserve trees in the forests, where they can clean the air and keep global-warming gas from building up.

A Brazilian woman who has lived in the United States for many years was explaining why it was difficult for her parents and sister to come to visit her in the United States.

(가) "What happens if Congress disagrees with the President?" her American friend asked. "Oh", she replied, "the President can just tell the Congress to take a vacation, and then he can go on and pass new laws or do whatever he wants."

(나) When they return, they can get their money back, but no interest is paid on it. This was the decision of the Minister of Finance and the President, she said, and the Congress was not even consulted.

(다) Because the government wishes to discourage people from traveling abroad and spending their money in other countries, the Minister of Finance decided to require Brazilian tourists to deposit \$1,200 in a special account before leaving the country.

- ① (가), (나), (다) ② (나), (가), (다)

Mary is six years old. She loves her grandmother a lot. Whenever she comes to visit her, she meets her at the port. One day she was taken to the port to see her grandmother off. When she got on the ship, Mary began to cry. She said to her mother, "Why does Grandmother live in the ocean and not on the ground like everybody else?"

- ① sad ② disappointed
③ anxious ④ humorous

문 9. 다음 중 밑줄 친 부분에 들어갈 가장 적절한 단어는?

Emily is a writer and is always writing things down. Even when she can't find paper, she scrambles to find envelopes, napkins, anything she can use to write down her thoughts. She does this because she is both realistic and disciplined enough to know humans run across too many ideas to remember all of them or even most of them. Good ideas come floating into our heads and will easily float out. Writers acknowledge they carry around a notebook so that the best of those ideas can make it to paper. You don't have to be a writer, however, to have good ideas floating through you. Keep a notebook and pen _____ and you will be able to hold onto those floating thoughts.

- ① neat ② handy
③ fancy ④ remote

Rosa Lopez was a maid working quietly and anonymously until she became a key witness in the O. J. Simpson trial. Suddenly, she was the focus of intense scrutiny. Lopez _____ cameras and reporters everywhere she went. Her every move was analyzed. She eventually returned to her native country to escape the pressure, only to find that the media followed her there.

- ① followed ② was hounded by
③ enjoyed treating ④ liked being interviewed by

문 11. 다음 글의 제목으로 가장 적절한 것은?

At one moment the word 'diplomacy' is employed as a synonym for 'foreign policy', as when we say 'British diplomacy in the Near East has been lacking in vigour'. At another moment it signifies 'negotiation', as when we say 'the problem is one which might well be solved by diplomacy'. More specifically, the word denotes the processes and machinery by which such negotiation is carried out. A fourth meaning is that of a branch of the Foreign Service, as when one says 'my nephew is working for diplomacy'.

- ① The importance of diplomacy
② Branches of politics
③ Diplomatic methods
④ Different interpretations of the word 'diplomacy'

A helicopter piloted by a woman lifted a () from a rooftop of La Sante Prison in Paris on Monday and flew him out. The escaped one was identified as Michel Vaujour, 34, who was found guilty of armed robbery last year. He was serving an 18-year sentence and this was his fourth escape from prison. According to police, the helicopter flew into the prison at about 10:45 A.M. and hovered over a prison building. Two people were aboard the aircraft. They dropped a line to Vaujour and then flew away.

In one of the most widespread man-made disasters the region has known, smoke from the fires has blanketed a broad swath of Southeast Asia this month. Flights have been canceled around the region, the busy shipping lanes of the Strait of Malacca have been disrupted by low visibility, and millions of people are coughing and wheezing. It is impossible to say how many people have been made sick by the smoke. The fires are mostly intentionally set. Hundreds of Indonesian and Malaysian companies - mostly large agricultural concerns, and some with high-placed Government connections - are using fire as a cheap and illegal means of land-clearing.

A survey reveals that most adults consider themselves "well informed about the affairs of the nation and the world." Yet a regularly taken Roper poll that asks, "From where do you obtain most of your information about the world?" has found the percentage of people who reply, "Television" has been increasing steadily over the past decade. The latest questionnaire found that well over 60 percent of the respondents chose television over other media as their major source of information. These two facts are difficult to _____ since even a casual study of television news reveals it is only a headline service and not a source of information enabling one to shape a world view.

Many women have prolonged difficulties achieving good sleep. As mothers, students, caretakers, and professionals, many of us lead hectic lives, filled with both obvious and subtle stressors that are on our minds as we attempt to settle into sleep. The sheer numbers of over-the-counter and prescription sleep aids give you an idea of how widespread insomnia is today. But the problem with these sleep aids is that even though they induce drowsiness, they do not promote real sleep — deep, lasting, and refreshing. And some of these agents, if taken over the course of months may lead to dependency or stop working altogether. Don't be surprised if your physician is not inclined to prescribe them.

- ① Women, as opposed to men, suffer from insomnia.
- ② There are many different kinds of pills for insomnia, but their safety isn't guaranteed.
- ③ Many women suffer from insomnia, but they need prescription to purchase sleep aids that help alleviate their symptom.
- ④ Many women suffer from insomnia, but doctors will never prescribe sleep aids for them.

It is now clear, from the results of the first research studies of this subject, dating from the 1960s, that all of these opinions are wrong.

(A) The first step in considering the nature of sign language is to eradicate traditional misconceptions about its structure and function. (B) Popular opinions about the matter are quite plain: sign language is not a real language but little more than a system of sophisticated gesturing; signs are simply pictorial representations of external reality; and because of this, there is just one sign language, which can be understood all over the world. (C) A clear distinction must be drawn, first of all, between sign language and gesture. To sign is to use the hands in a conscious, “verbal” manner to express the same range of meaning as would be achieved by speech. (D)

Every year, people spend approximately 400 million dollars on detergents to clean, and help keep their laundry fresh. Most consumers of detergents are not novices, meaning that they have tried various brands of detergents and carefully selected the best product. To each customer, the best product may have a different priority. For example, some people may select the most well-known product, while others purchase according to how economical the product may be. Still, for others buying environmentally safe products is their priority.

However, many customers do not actually compare what is inside the box of various detergents. A surprising study showed that while each brand had its own marketing strategy, over 90% of the same basic ingredients were identical to all brands. Another interesting result was found when veteran detergent customers were not shown the box, and were asked to choose their favorite brand based only on the result of the detergent. Only 3% were able to identify their brand and even then, most of them were not entirely sure. This goes to show that while detergents may seem different, marketing is just giving basically the same products different clothes.

- ① How environmentally safe the products are
② How famous the products are
③ How economical the products are
④ What ingredients are in the products

“The only way to stop the soaking of taxpayers is by showing up and making our voices heard,” City Councilman Peter Koo said. “We must remain ever watchful, informed and ready to fight.”

He attended a Queens Borough Board meeting Monday where a representative from the City Department of Environmental Protection spoke in favor of the proposed rate hike.

Myths try to answer several questions. Where did the world come from? What are the gods like, and where did they come from? How did humanity originate? Why is there evil in the world? What happens to people after they die? Myths also try to account for a society's customs and rituals. Beyond giving such explanations, myths are used to justify the way a society lives. Ruling families in several ancient civilizations found justification for their power in myths that described their origin in the world of the gods or in heaven. In India the breakdown of society into castes is based on ancient mythology that emerged in the Indus Valley after 1500 B.C.

Zero percent interest for the next six months, or even a year, on all balance transfers. No annual fees. Reward points for everyday purchases. Choose airline tickets, hotel stays, car rentals, a variety of great brand-name products or just get cash back. What red-blooded American credit-card holder could resist such a deal? Well, if you're smart, maybe you. Tantalizing offers like these from your credit-card issuers are increasingly filled with traps that can pile on unexpected fees or trigger punitive interest, as high as 35%. These details are spelled out in the fine print of promotions and cardholder agreements. But, says Curtis Arnold of CardRatings.com, "You have to be incredibly diligent to avoid the pitfall."

- ① Lower rates and other deals sound great, until you find out what you're really paying.
- ② Credit-card companies do not always behave badly towards their customers.
- ③ Credit-card companies will be fined unless they provide the details of cardholder agreements.
- ④ Reward points or low punitive interests are being added to the existing benefits.

The biggest hurdle to cross is realizing that credit is not an extension of income. Living within your means can require a major lifestyle change. Credit, when used wisely, is a useful money-management tool, but learning when and how to use it requires dedication and diligence. However, most consumers who have successfully made the change to debt-free living say that living with one credit card and using a spending plan has created a sense of freedom that they have never known before. All the stress and negativity of living from paycheck to paycheck has vanished.

- ① It is not wise to regard credit as a part of income.
- ② For debt-free living, it is helpful to live with one credit card.
- ③ If you work with dedication and diligence, you will be able to live free from debt.
- ④ To spend money with a plan will relieve you of the stress of barely making both ends meet.

With a well-diversified production structure, German and Japanese producers are now more resilient to shocks. The ruthless cost-cutting that went along with outsourcing significant parts of their manufacturing production has enabled them to stay competitive and maintain their traditional focus on export-driven growth. This focus is not always an advantage in a modern consumer society. At the moment, however, it helps. As ever more people in ever more emerging markets are leaving abject poverty behind and are turning into consumers, the export-oriented companies of the developed world find fast-growing markets for their products.

- ① The production structure of German and Japanese producers makes it easier to adapt to shocks.
- ② Cost-cutting is the more effective strategy than outsourcing for German and Japanese producers to stay competitive.
- ③ The focus on export-driven growth is conducive to German and Japanese producers.
- ④ German and Japanese firms are able to sell more products due to the increasing number of customers.

The definition of success for many people is one of acquiring wealth and a high material standard of living. It is not surprising, therefore, that people often value education for its monetary value. The belief is widespread that the more schooling people have, the more money they will earn when they leave school. This belief is strongest regarding the desirability of an undergraduate university degree, or a professional degree such as medicine or law. The money value of graduate degrees in 'nonprofessional' fields such as art, history, or philosophy is not as great.

In the past, it was possible for workers with skills learned in vocational schools to get a high-paying job without a college education. Increasingly, however, the advent of new technologies has meant that more and more education is required to do the work.

As soon as we are born, the world gets to work on us and transforms us from merely biological into social units. Every human being at every stage of history or pre-history is born into a society and from his earliest years is molded by that society. The language which he speaks is not an individual inheritance, but a social acquisition from the group in which he grows up. Both language and environment help to determine the character of his thought; his earliest ideas come to him from others. As has been well said, the individual apart from society would be both speechless and mindless. The lasting fascination of the Robinson Crusoe myth is due to its attempt to imagine an individual independent of society. The attempt fails. Robinson is not an abstract individual, but an Englishman from York.

- ① Every act determines our membership of the society.
- ② Society and the individual are complementary to each other.
- ③ Language and environment determine our way of thinking.
- ④ Human beings cannot live independently of society.

Mr. Rickey took the manager aside and said he would move the entire team to another hotel unless the black athlete was accepted. The threat was a bluff because he knew the other hotels also would have refused accommodations to a black man. It is common knowledge that ability to do a particular job and performance on the job do not always go hand in hand. Persons with great potential abilities sometimes fall down on the job because of laziness or lack of interest in the job, while persons with mediocre talents have often achieved excellent results through their industry and their loyalty to the interests of their employers. It is clear, therefore, that the final test of any employee is the person's performance on the job.

Cultural differences between Japanese and American managers have presented the biggest obstacles to Japanese companies investing in America. A seminar for Japanese executives working in America was attended by 25 men, nearly all of them in identical dark suits. Despite the room's stifling heating system, they resolutely refused to remove their jackets. Their coffee break lasted exactly the scheduled ten minutes. They did not ask any questions until after they had got to know one another a bit better at lunch. A similar seminar for 25 Americans working for Japanese subsidiaries in America included eight women. Several of the men removed their jackets on entering the room. A ten minute coffee break stretched beyond 20 minutes. Participants asked questions and several aggressively contradicted what the speakers had to say.

- ① Japanese executives in the seminar formed heterogeneous grouping in gender relationship.
② Japanese executives in the seminar put on the same dark suits.
③ After they had known one another, Japanese executives in the seminar came to ask questions.
④ American executives showed active reactions to the speakers of the seminar.

The United States and Canada will someday join the 95 percent of the world that uses the metric rather than the English system of measurement. Inches will become centimeters, pounds will become kilograms, quarts will become liters, and degrees Fahrenheit will become degrees centigrade (also called Celsius). The conversion to the metric system will not be easy, however, and will require enormous amounts of money and time. For example, every piece of machinery in every factory and every office will have to be replaced. Furthermore, every machine and tool that makes, repairs, or supplies another piece of equipment will have to be changed. Therefore, although the United States and Canada are committed to "going metric," it will not happen next week or even next year.

문 10. The above passage suggests that the conversion to the metric system should be _____.

- ① drastic ② exigent
③ gradual ④ essential

Americans over 65 are probably the fastest growing age group in the country. By the year 2030, according to the U.S. Census Bureau, nearly one-quarter of the United States population will be over 65. The major reasons for this graying of America are recent medical advances that have conquered many diseases that used to be fatal, so that more people are living longer. As a result of major social and economic changes in the United States, families, the traditional support system in other countries, are not in a position to take care of their elderly relatives. The majority of American women are currently working. Consequently, the traditional role of daughter or daughter-in-law as care-giver has become obsolete. Moreover, houses and apartments are often smaller than they used to be. Also, increased mobility has separated and spread families over thousands of miles. More often, however, it is the older people who do not want to move in with their children.

- ① In about twenty years, elderly citizens will constitute about 25 % of the U.S. population.
② Medical advances have contributed to increasing America's aging population.
③ American women traditionally served as a role to provide care in the family.
④ Increased mobility enabled the elderly to get together with their children.

When asked to make a donation, even those who would like to support the charity in some way say no, because they assume the small amount they can afford won't do much to help the cause.

- A. After introducing himself, the researcher asked the residents, "Would you be willing to help by giving a donation?" For half of the residents, the request ended there. For the other half, however, he added, "Even a penny will help."
B. Based on this reasoning, a researcher thought that one way to urge people to donate would be to inform them that even a small sum would be helpful. To test this hypothesis, he went to door-to-door to request donations for the American Cancer Society.
C. When he analyzed the results, the researcher found that, consistent with his hypothesis, people in the "even-a-penny-will-help" condition were almost twice as likely as those in the other condition to donate to the cause.

As soon as we are born, the world gets to work on us and transforms us from merely biological into social units. Every human being at every stage of history or pre-history is born into a society and from his earliest years is moulded by that society. The language which he speaks is not an individual inheritance, but a social acquisition from the group in which he grows up. In a word, the individual apart from society would be both speechless and mindless. The lasting fascination of the Robinson Crusoe myth is due to its attempt to imagine an individual independent of society. The attempt _____. Robinson is not an abstract individual, but an Englishman from York; he carries his Bible with him and prays to his tribal God. The myth quickly bestows on him his Man Friday; and the building of a new society begins.

Some people have the ability to awaken at a particular time each day. But the rest of us need a little help. Lots of people use alarm clocks that generate harsh sounds like buzzes or beeps. They've always used alarm clocks, which are cheap and functional, so they never consider the alternative. They wake to an alarm day after day. Don't be one of them. Alarms signal danger and urgency. You don't need to start your day with that in mind. Instead, it's much better to ease into wakefulness as pleasant music wafts through the air and into your consciousness. If you want to get your day off to a good start, wake up to music.

How different is the relationship of a customer to a department store. He is impressed by the vastness of the building, the number of employees, the profusion of commodities displayed; all this makes him feel small and unimportant by comparison. As an individual he is of no importance to the department store. There is nobody who is glad about his coming, nobody who is particularly concerned about his wishes. In 1848, gold was discovered at Sutter's Mill, about 100 miles east of San Francisco, and the first great gold rush began. Within a year 100,000 people, only 8,000 of whom were women, had reached the coast of California. More than half of them had traveled overland across the American continent. "Gold fever" began to spread. Homes, farms, and stores were abandoned as everybody raced for California. Many came by sea, and in July 1850, more than 500 ships were anchored in San Francisco Bay, many of which had been deserted by gold-hungry sailors. A few people became fabulously rich, but it was a risky business. Law and order broke down. Even if a miner "struck it rich," there were always those who would try to take it away: gamblers, outlaws, thieves, and saloon keepers.

- ① Among the people of gold rush, women occupied a larger portion.
② Over 50,000 people had crossed American continent only by plane.
③ During gold rush, many people became unbelievably rich.
④ American "Gold fever" had begotten various crimes.

We did almost all the work on our joint projects together, including the drafting of questionnaires. Language alone is not enough to explain the rise of modern nationalism. Even language is a shorthand for the sense of belonging together, of sharing the same memories, the same historical experience, the same cultural and imaginative heritage. When in the eighteenth century, nationalism began to form as a modern movement, its forerunners in many parts of Europe were not soldiers and statesmen but scholars and poets who sought to find in ancient legends and half forgotten folksongs the "soul" of the nation. But it was language that enshrined the memories, the common experience and the historical record.

- ① Language contributed to the rise of modern nationalism.
- ② The movement of modern nationalism was led by government officials.
- ③ It was not until the 18th century that nationalism became a modern movement.
- ④ Intellectuals played a role in the formation of modern nationalism.

Religion plays an extremely important role in American cultural life. Predominantly Christian, the country possesses two main religious forces: Protestantism and Roman Catholicism. In America today, two-thirds of all church-going people belong to one of three faiths – Baptist, Methodist, and Roman Catholic – which claimed memberships in 1976 of 26 million, 13 million, and 49 million persons, respectively. Besides these three faiths, there are many others, both Christian and non-Christian, including a large and influential Jewish community and several other faiths without a European historical base, such as Buddhism, Islam, and Mormonism.

- ① Two-thirds of Americans are Methodists.
- ② As of 1976 there were twice as many Baptists as Methodists in America.
- ③ Mormonism is a faith of a non-European origin.
- ④ Jews exercise their influence over American society.

Globalization has its upsides and downsides. Countries like China adopt a basically proglobalization strategy, adapt it to their own political, social, and economic conditions, and reap the benefits. Of course, there are costs to this growth as well — in terms of environment, social cohesion, and economic equality, which each government needs to monitor and mitigate — but let's stop downplaying the economic benefits, and let's stop pretending that the antiglobalization advocates have any realistic strategy for bringing many people out of poverty quickly. There are many speeds that a country can go at down this globalization path — each country has to choose the right speed for its particular social and political circumstances. But there is only one right direction.

- ① Globalization promotes social cohesion and economic equality, not to mention economic benefits.
- ② Antiglobalization movement can be a realistic alternative to globalization.
- ③ Each government shouldn't monitor the downsides of globalization.
- ④ Economic benefits from globalization override environmental and social problems.

Over the course of history it has been artists, poets and playwrights who have made the greatest progress in humanity's understanding of love. Romance has seemed as inexplicable as the beauty of a rainbow. But these days scientists are challenging that notion, and they have rather a lot to say about how and why people love each other. For a start, understanding the neurochemical pathways that regulate social attachments may help to deal with defects in people's ability to form relationships. All relationships rely on an ability to create and maintain social ties. Defects can be disabling, and become apparent as disorders such as autism and schizophrenia. Research is also shedding light on some of the more extreme forms of sexual behaviour. And some utopian groups see such work as the doorway to a future where love is guaranteed because it will be provided chemically, or even genetically engineered from conception.

According to the passage above, scientists now consider love as something _____.

- ① enviable
- ② edible
- ③ expiable
- ④ explicable

Zoologists at SUNY have observed how sea turtles develop into males or females. Turtle eggs that lie in the sand at cool temperatures produce male turtles. And eggs that incubate at about 5 degrees higher produce females. If dinosaurs were like modern turtles, a sudden drop in temperature for even a short time may have simply eliminated all females from the species. Under stress, some female lizards that are alive today, reproduce hermaphroditically, that is, all by themselves. But male lizards cannot manage on their own. The world of the dinosaurs may have ended initially with a bang, as volcanoes erupted or an asteroid crashed. But then, as lonely males sought fruitlessly for mates, it may have simply faded away, with a whimper.

- ① Turtles may help us understand the extinction of dinosaurs.
- ② Temperatures have no effect on the extinction of dinosaurs.
- ③ Lizards usually reproduce hermaphroditically.
- ④ Dinosaurs became extinct due to a particular calamity.

The fighting escalates to a place where you no longer feel like you're understood by your partner. Physical intimacy stops, communication stops, and you are living like roommates. Resentment builds, and you get in your head too much. You are no longer about feelings, and you start punishing each other. The next step is you fight less. When you get to the breakup point, you actually fight less with your partner. You fight less because in your mind and heart you start detaching yourself from the other person, and you don't care as much anymore. You have already made a determination that he doesn't understand you, that he will never understand you, and that the relationship just won't work out. The minute you get into a fight, you just walk away from it. That is a sure sign that you are at the breakup point.

- ① Breakups are immediately followed by big fights.
- ② You fight less when you get to the breakup point.
- ③ Resentment increases because physical intimacy increases.
- ④ Fighting at the final stage is more violent than ever.

New research suggests that when a home's value falls below 75 percent of the amount owed on the mortgage, the owner starts to think hard about walking away, even if he or she has the money to keep paying. The number of Americans who owed more than their homes were worth was virtually nil when the real estate collapse began in mid-2006, but by the third quarter of 2009, an estimated 4.5 million homeowners reached the critical threshold, with their home's value dropping below 75 percent of the mortgage balance. Walking away — also called "jingle mail," because of the notion that homeowners just mail their keys to the bank, setting off foreclosure proceedings — began in the Southwest during the 1980s oil collapse.

* foreclosure : 저당물을 찾는 권리의 상실

- ① Homeowners try not to walk away no matter what their houses are worth.
 ② In mid-2006, there was almost nobody whose amount of money on the mortgage was more than their homes' value.

Social media is a great way to stay in contact with friends and family, but it's also being used to help generate funds for charities the world over. Social networking sites are organizing events to benefit others. Twestival, for example, is a one-day gathering of users all across the social media sites in an effort to raise funds for non-profit organizations around the globe. Last year, the festival raised \$1.75 million through its campaign. Campaigns like this have sprung up all over the world, and with the help of social media, donation rates are higher than ever before.

Six-year-old Mary was given a simple train set for her birthday, but it took up all the floor space in her room. Mary and her parents put their heads together. Father, who had twisted his ankle on it, wanted it to be put away at night. Mother, who had a feeling for tidiness, tended to agree with him, though she understood Mary's feelings too. Mary tried to find a solution for herself by using her head. It was Mary who, at the last minute, saw that moving the bed along the wall would solve the problem. Her _____ was rewarded by her parents' sincere expressions of delight at her competence, and she then had the train set all the time.

Charles Darwin was about as keen an observer of nature as ever walked the earth, but even he missed the pink iguana of the Galapagos. The rare land iguanas were first seen, in fact, only in 1986, when one was spotted by park rangers on Volcan Wolf on the island of Isabela. Since then, they have been found only on that volcano, which would explain why Darwin missed them, since he didn't explore it. An analysis by the researchers shows that there is significant genetic isolation between the pink iguana and a yellow iguana that also lives on Volcan Wolf. And besides the obvious difference in color, there are differences in morphology between the two reptiles, the researchers say. Their genetic analysis suggests that the pink iguana diverged from the other land iguana lineages about 5.7 million years ago. Since Volcan Wolf formed much more recently, the current distribution of the pink iguanas only on that volcano represents something of a riddle, the researchers report.

- ① Charles Darwin first found the pink iguana of the Galapagos.
- ② The pink iguana is similar to yellow iguanas in morphology.
- ③ The pink iguana originates in Volcan Wolf.
- ④ Both pink iguanas and yellow iguanas are found on Volcan Wolf.

What an Indian eats depends on his region, religion, community, and caste. It also depends on his wealth. A vast proportion of the Indian population is made up of the rural poor who subsist on a diet that meets only about 80 percent of their nutritional requirements. Many of the poor, unable to find work all year round, and therefore unable to buy food everyday, have to manage their hunger by fasting on alternate days. In Bengal, the meals of the poor are made up of rice, a little dhal flavored with salt, chillies, and a few spices, some potatoes or green vegetables, tea and paan. Paan, which is an areca nut mixed with spices and rolled up in a betel leaf, is chewed after the meal. Although it seems a luxury, in fact, the poor use it to stave off hunger.

- ① Indians' diets vary across their religion and wealth.
- ② The food the rural poor in India take doesn't meet their nutritional requirements.
- ③ Many poor Indians go without food every other day.
- ④ In Bengal, paan is luxurious food for the poor.

They explore every part of the engine, body, and brakes; they do all kinds of tests with expensive machines. Best of all, the comprehensive examination takes only about half an hour. With the clinic's report in your hand no mechanics will be able to defraud you by telling you that you need major repairs when only a small repair is necessary.

- ① The clinic discovers the problems of the car.
- ② The clinic requests repairs to the clients without telling the truth.
- ③ In spite of the high fees, the clinics are popular among automobile owners.
- ④ The clinic's report prevents you from being cheated by mechanics.

(B) In recent years, these flames of controversy have died down, and it is now accepted that in all animals with reasonably complex brains, adult behavior is acquired through a mix of inherited traits and experience gained as the individual goes through life. (C) The more sophisticated an animal's brain, the greater the role that learning is likely to play in shaping its behavior, and the more variation we shall find between one individual and another. (D) And the information acquired and lessons learned during infancy and childhood, when behavior is at its most flexible, are likely to have particular significance.

Children usually feel sick in the stomach when traveling in a car, airplane, or train. This is motion sickness. While traveling, different body parts send different signals to the brain. Eyes see things around and they send signals about the direction of movement. The joint sensory receptors and muscles send signals about the movement of the muscles and the position in which the body is. The skin receptors send signals about the parts of the body which are in contact with the ground. The inner ears have a fluid in the semicircular canals. This fluid senses motion and the direction of motion like forward, backward, up or down. When the brain gets timely reports from the various body parts, it finds a relation between the signals and sketches a picture about the body's movement and position at a particular instant. But when the brain isn't able to find a link and isn't able to draw a picture out of the signals, it makes you feel sick.

Although intimately related, sensation and perception play two complementary but different roles in how we interpret our world. Sensation refers to the process of sensing our environment through touch, taste, sight, sound, and smell. This information is sent to our brains in raw form where perception comes into play. Perception is the way we interpret these sensations and therefore make sense of everything around us. To illustrate the difference between sensation and perception, take the example of a young baby. Its eyes take the same data as those of an adult. But its perception is entirely different because it has no idea of what it is looking at. Goods for which the marginal costs are close to zero are inherently public goods and should be made publicly available. Bridges and roads are good examples. Once society has incurred the capital costs of constructing a bridge or road, maximum benefit from the initial investment is gained only if use is not restricted by charging. 따라서 사람들은 무료로 그러한 시설들을 이용할 수 있어야 한다.

- ① Therefore, people freely such facilities must be able to use.
② Hence, people should be allowed free access to such facilities.
③ Therefore, people must make access to such facilities without charging.
④ Hence, people should be given freedom to such facilities' accession.

You'll never get a fair distribution of goods, or a satisfactory organization of human life, until you abolish private property altogether. So long as it exists, the vast majority of the human race, or the morally superior part of it, will inevitably go on laboring under the burden of poverty, hardship, and worry.

(A) Private property assumes that there's nothing wrong with your being rich, when your neighbors all around you are poor. (B) When everyone's entitled to get as much for himself as he can, all available property is bound to fall into the hands of a small minority. (C) This means that everyone else is poor. (D) And wealth will tend to vary in inverse proportion to merit, since the rich will be totally useless greedy characters, while the poor will be simple, honest people whose daily work is profitable to the community.

Experienced travel agents of yesterday are being rapidly replaced by new ones who have less firsthand knowledge of destinations. What this new breed faces are clients who do not know much about geography but have leisure time and money at their disposal. The solution is to equip these less knowledgeable travel agents with computer and video technology to help them match clients with right destinations.

(A) The client then views video programs on those destinations that seem most appealing, and finalizes his or her vacation plan. This way, travel agencies use modern technology to compensate for the inexperience of many agents on their payroll.
(B) Responses collected are fed into a computer program to produce a list of suggested destinations and itinerary options matched to the client's preferences.
(C) The key is to ask a client about his or her preferred vacation in mind. Included might be specific requests the representatives of which are "I don't like to pack and unpack repeatedly," or "I don't like to quickly move around and see many things."

His hiring concluded an exhaustive process that collected input from all segments of the university.

The selection as Heoha University's tenth president of Carlos Jimenez, the current chancellor at the University of Licafornia since 2008, was announced at the board of trustees meeting on March 15. (A) He will begin his term on July 1. (B) Faculty, students, and alumni were invited to nominate candidates. An advisory subcommittee also gathered input through 40 public forums held around the country. (C) The nominations were first narrowed to 100 names, then to 20 who received interviews, and then to five finalists. Board member Jeffrey Pinorius, who headed the search committee, said that Jimenez emerged as the clear choice. (D) "The presidential search committee was responsible for finding a leader with a clear vision and proven leadership skills required for running a highly complex organization," he added.

The benefits of exercise extend far beyond physical health improvement. Many people work out as much for mental and spiritual well-being as for staying fit. Can being physically active make you happy? Can it help you deal with life stress? Can it lead to a more spiritual and religious life? For many, the answer is yes. Exercise, such as walking, increases blood flow to the brain. A study of people over 60 found that walking 45 minutes a day at 6km/h enhanced the participants' thinking skills. They started at 15 minutes of walking and gradually increased exercise time and speed. The result was that the participants were found mentally sharper with this walking program.

There are ninety-two naturally occurring elements on Earth, plus a further twenty or so that have been created in labs. Not a few of our earthly chemicals are surprisingly little known. Astatine, for instance, is practically unstudied. It has a name and a place on the periodic table, next to Marie Curie's polonium, but almost nothing else. The problem is _____. There just is not much astatine out there. The most elusive element of all, however, appears to be francium, which is so scarce that it is thought that our entire planet may contain, at any given moment, fewer than twenty francium atoms. Altogether only about thirty of the naturally occurring elements are widespread on Earth.

Why do we reach for a candy bar at the end of a heavy meal? We certainly are not hungry. Why do we like salt and other seasoning in our food? Soldiers who have been temporarily deprived of salt report that at its maximum intensity the craving for salt is more insistent than the desire for food itself. Cows and other livestock which are not receiving enough lime eat the bones of other animals to relieve the craving. These conditions are not thoroughly understood at present but it seems certain that somewhere in the body there are receptors which respond to the chemical conditions in the blood brought about by the absence of certain substances necessary for the body. When these receptors perceive such conditions, we have _____

- ① an aversion to salty foods or sweets.
- ② an appetite for particular substances needed.
- ③ an ability to prevent food-borne bone diseases.
- ④ an ambivalent sensory receptor for digestion.

Researchers found that most people have very poor memories for very familiar things—like coins. Try it with other familiar objects in your environment, such as stamps, or try to remember the details of clothes that other people with whom you frequently socialize typically wear. The key point here is that we tend to remember the information that is _____. For instance, we may be much better at recalling the typical size, dimensions or colour of coins than the direction of the head or the text on the coin, because the size, dimensions or colour may well be more relevant for us when we are using money. And when remembering people, we will typically recall their faces and other distinguishing features that remain relatively invariant and are, therefore, most important in identifying them, rather than items which may change.

E-books obviously have certain advantages (like the fact that you can carry lots of them around with you), but for many book buyers their main appeal is that they're cheaper. Against that, the Codex Group finds that people of all ages still prefer print for serious reading; e-book sales are dominated by genre fiction—"light reading." We do read things differently when they're on a page rather than on a screen. A recent study found that people reading on a screen tended to skip around more and read less intensively, and plenty of research confirms that people tend to comprehend less of what they read on a screen. The differences are small, but they may explain the persistent appeal of paper. Indeed, _____.

- ① e-book sales rose at triple-digit rates
- ② hardcover sales rose last year by a hundred million dollars
- ③ bookstores became barns selling piles of outdated merchandise
- ④ the book industry is heading down the path that the music industry took

A study of whether phone counseling will be equally helpful for everyone with depression has shown unclear results. The Seattle researchers focused on patients who sought treatment and were motivated enough to begin taking drugs. Dr. Jurgen Unutzer, a psychiatrist at the University of Washington who was not involved in the study, said that only about a quarter of all Americans suffering from depression try drug therapy each year. The rest do not, because of lack of awareness, access or interest, psychiatrists say, and many people with depression are wary of taking mood-altering drugs. But because 40 percent of the people who begin anti-depressant therapy quit within the first month, doctors should consider the telephone a powerful ally, said the study's lead author, Dr. Gregory E. Simon, a psychiatrist in Washington. "This represents an important change in the way we approach treatment," Dr. Simon said, "not only using the phone, but being persistent, proactive, reaching out to people and finding them where they are. Depression is defined by discouragement; very often they're not going to come to you."

- ① Phone counseling proved to have a strong positive effect on everyone suffering from depression.
- ② Dr. Jurgen Unutzer conducted the study on patients who sought drug therapy for depression.
- ③ A majority of people with depression are reluctant to take medicine for its treatment.
- ④ Forty percent of the people showed a dramatic improvement within the first month of their anti-depressant therapy.

It may seem improbable that you can make money by selling to people who don't have much, but companies that have actually bothered to try are flourishing. Hindustan Lever has built a lucrative business in Africa and India selling brand-name consumer goods, from lotion to salt. Casas Bahia, a department-store chain, now sells more than five billion dollars' worth of brand-name electronics and appliances to working-class Brazilians every year. Big companies often disdain what they think of as the low-end market, because they make a lot less money on each sale than they do selling high-end goods. But, because of the sheer size of that market, they can still make a lot of money on it.

- ① Poor people do not have high standards for their products.

Depending on your values, different kinds of numbers may be important to you. To some, it's cholesterol count and blood pressure figures; to others, it's the number of years they've been married. To many, the sum total in the retirement account is the number-one number, and some people zero in on the amount left on their mortgage. But I contend that your per-hour worth should be among the top-of-mind numbers that are important to you — no matter what your values or priorities are — even if you don't earn your living on a per-hour rate. Knowing the value of your time enables you to make wise decisions about where and how you spend it so you can make the most of this limited resource according to your circumstances, goals, and interests. Obviously, the higher you raise your per-hour worth while upholding your priorities, the more you can propel your efforts toward meeting your goals, because you have more resources at your disposal — you have either more money or more time, whichever you need most.

Making mistakes is central to the education of budding scientists and artists of all kinds, who must have the freedom to experiment, try this idea, flop, try another idea, take a risk, be willing to get the wrong answer. One classic example is Thomas Edison's reply to a reporter who was lamenting Edison's ten thousand experimental failures in his effort to create the first incandescent light bulb. "I have not failed," he told the reporter. "I successfully discovered 10,000 elements that don't work." Most children, however, are denied the freedom to noodle around, experiment, and be wrong in ten ways, let alone ten thousand. The focus on constant testing to measure and standardize children's accomplishments has intensified their fear of failure. It is certainly important for children to learn to succeed; but it is just as important for them to learn not to fear failure.

A growing number of people are seeking medical attention for vitamin D deficiency, a common condition among those who spend a lot of time indoors. It is well known that vitamin D deficiency can affect one's muscles, bones and immunity and is even associated with cancer. Vitamin D is produced by the body in response to skin being exposed to sunlight. A lot of women, however, wear sunscreen before they go out, and this often makes it more difficult for their body to produce vitamin D — as _____.

- ① many types of sunscreen may contain beneficial substances
- ② sunscreen can block vitamin D-producing ultraviolet rays
- ③ their sunscreen is professionally prescribed
- ④ they exercise on a regular basis

Muzafer Sherif's research on the autokinetic effect is a good example of the role of _____ in perception. People in his experiments were told that a spot of light projected on the wall would move and were instructed to estimate the amount of movement. Although the spot of light never actually moved, the people inevitably reported movement. When told that the spot of light would even trace out letters and words, participants began reporting words and sentences. Clearly what they thought would happen resulted in the addition of a considerable amount of information to their sensations.

Mythology was an integral part of Egyptian culture for much of its timespan. Characters and events from myth permeate Egyptian art, architecture, and literature. Myths _____ (A) _____ many of the rituals performed by kings and priests. Educated Egyptians believed that a knowledge of myth was an essential weapon in the fight to survive the dangers of life and the afterlife.

There is disagreement among Egyptologists about when mythical narratives first developed in Egypt. This dispute is partly due to the difficulty of deciding what should be counted as a myth. Today, the term myth is often used in an unfavorable way to refer to something that is exaggerated or untrue. In ancient cultures, myth did not have this _____ (B) _____ connotation; myths could be regarded as stories that contained poetic rather than literal truths. Some scholars separate myths from other types of traditional tale by classifying them as stories featuring deities. This simple definition might work quite well for Egypt, but not for all cultures.

We rarely get tired when _____. For example, I recently took a vacation in the Canadian Rockies up around Lake Louise. I spent several days trout fishing along Coral Creek, fighting my way through brush higher than my head, stumbling over logs, struggling through fallen timber—yet after eight hours of this, I was not exhausted. Why? Because I was excited, exhilarated. I had a sense of high achievement: six cutthroat trout. But suppose I had been bored by fishing, then how do you think I would have felt? I would have been worn out by such strenuous work at an altitude of seven thousand feet.

- ① we are doing something interesting and exciting
- ② we get a good night's sleep and a hearty meal
- ③ we do household chores for our family
- ④ we are elevated to high altitudes

The 'ten-thousand-hour rule' states that expertise requires at least ten thousand hours of practice. Clearly, though, time is not the only requirement. Years of one's life spent practicing the wrong things will not lead to expertise any more than spending the same amount of time watching television. Time is a basic prerequisite, but not _____. Layered upon time are a slew of other ingredients, life focus, precision, discipline, and desire.

- ① a sufficient one in itself
- ② a requisite for time
- ③ a tolerant one of others
- ④ a predictor of longevity

문 19. George Stephenson에 관한 다음 글의 내용과 일치하지 않는 것은?

George Stephenson gained a reputation for working with the primitive steam engines employed in mines in the northeast of England and in Scotland. In 1814, Stephenson made his first locomotive, 'Blucher.' In 1821, Stephenson was appointed engineer for the construction of the Stockton and Darlington railway. It opened in 1825 and was the first public railway. In October 1829, the railway's owners staged a competition to find the best kind of locomotive to pull heavy loads over long distances. Stephenson's locomotive 'Rocket' was the winner, achieving a record speed of 36 miles per hour. The opening of the Stockton and Darlington railway and the success of 'Rocket' stimulated the laying of railway lines and the construction of locomotives all over the country. Stephenson became engineer on a number of these projects and also participated in the development of railways in Belgium and Spain.

That plunge in poverty levels is truly one of the greatest achievements in human history.

Welfare helps alleviate poverty. But growth can end it. Asia's example over the past half-century teaches that there are two critical ways to raise incomes: create jobs — and create more jobs. And the way to do that is to boost economic growth. (①) When nations like China set in place the market-friendly policies to supercharge their growth rates, poverty melted away. (②) In 1981, figures the World Bank, about 52 % of the population of the developing world lived on less than \$1.25 a day. (③) By 2008 that share had shrunk to 22 %, owing largely to gains made in Asia. (④) But it isn't enough. The International Monetary Fund recently stated that nearly all economies — advanced and emerging — suffered a widening gap between rich and poor in the past three decades.

How do you describe the times we live in, so connected and yet fractured? Linda Stone, a former Microsoft techie, characterizes ours as an era of continuous partial attention. At the extreme end are teenagers instant-messaging while they are talking on the cell phone, downloading music and doing homework. But adults too live with all systems go, interrupted and distracted, scanning everything, multi-technological-tasking everywhere. We suffer from the illusion, Stone says, that we can expand our personal bandwidth, connecting to more and more. Instead, we end up overstimulated, overwhelmed and, she adds, unfulfilled.

- ① Modern technology helps us to enrich our lives.
- ② We live in an age characterized by lack of full attention.
- ③ Family bond starts to weaken as a result of smart phone development.
- ④ The older generation can be as technologically smart as the younger one.

Polar bears are mammals that belong to the bear family. They are one of the largest animals in the Arctic and one of the largest meat-eating animals in the world. They can weigh up to 680 kilograms and can be up to 3.4 meters tall. Polar bears have thick, oily, and water-repellent fur. This fur covers their body, including the spaces between their pads on their paws. Their white fur helps them blend in with the snow and ice. They use only their broad front paws to swim through the water. As for their food, polar bears hunt and eat seals from time to time. They also eat fish, grass, or even dead animals and stranded whales.

- ① Polar bears have fur that is permeable to water.
- ② Polar bears have no fur on their paws.
- ③ Polar bears rely on their front paws for swimming.
- ④ Polar bears eat only meat.

When we think of the people who make our lives miserable by spreading malicious viruses, most of us imagine an unpopular teenager boy, brilliant but geeky, venting his frustrations from the safety of a suburban bedroom. Actually, these stereotypes are just that — stereotypes — according to Sarah Gordon, an expert in computer viruses and security technology. Since 1992, Gordon has studied the psychology of virus writers. "A virus writer is just as likely to be the guy next door to you," she says. The virus writers Gordon has come to know have varied backgrounds; while predominantly male, some are female. Some are solidly academics, while others are athletic. Many have friendships with members of the opposite sex, good relationships with their parents and families; most are popular with their peers. They don't spend all their time in the basement. One virus writer volunteers in his local library, working with elderly people. One of them is a poet and a musician, another is an electrical engineer, and others work for a university quantum physics department.

Few words are tainted by so much subtle nonsense and confusion as *profit*. To my liberal friends the word connotes the proceeds of fundamentally unrespectable and unworthy behaviors: minimally, greed and selfishness; maximally, the royal screwing of millions of helpless victims. *Profit* is the incentive for the most unworthy performance. To my conservative friends, it is a term of highest endearment, connoting efficiency and good sense. To them, *profit* is the ultimate incentive for worthy performance. Both connotations have some small merit, of course, because profit may result from both greedy, selfish activities and from sensible, efficient ones. But overgeneralizations from either bias do not help us in the least in understanding the relationship between profit and human competence.

In an early demonstration of the mere exposure effect, participants in an experiment were exposed to a set of alphabets from the Japanese language. As most people know, Japanese alphabets look like drawings and are called ideograms. In the experiment, the duration of exposure to each ideogram was deliberately kept as short as 30 milliseconds. At such short durations of exposure—known as subliminal exposure—people cannot register the stimuli and hence, participants in the experiment were not expected to recall seeing the ideograms. Nevertheless, when participants were shown two sets of alphabets, one to which they had been previously exposed and another to which they hadn't, participants reported greater liking for the former even though they couldn't recall seeing them! These results have been replicated numerous times and across a variety of types of stimuli, so they are robust. What the mere exposure results show is that _____.

- ① we can learn the Japanese language with extensive exposure.
- ② duration is responsible for the robust results across studies.
- ③ it is impossible to register the stimuli at short durations.
- ④ people develop a liking towards stimuli that are familiar.

Soils of farmlands used for growing crops are being carried away by water and wind erosion at rates between 10 and 40 times the rates of soil formation, and between 500 and 10,000 times soil erosion rates on forested land. Because those soil erosion rates are so much higher than soil formation rates, that means a net loss of soil. For instance, about half of the top soil of Iowa, the state whose agriculture productivity is among the highest in the U.S., has been eroded in the last 150 years. On my most recent visit to Iowa, my hosts showed me a churchyard offering a dramatically visible example of those soil losses. A church was built there in the middle of farmland during the 19th century and has been maintained continuously as a church ever since, while the land around it was being farmed. As a result of soil being eroded much more rapidly from fields than from the churchyard, the yard now stands like a little island raised 10 feet above the surrounding sea of farmland.

- ① A churchyard in Iowa is higher than the surrounding farmland.
- ② Iowa's agricultural productivity has accelerated its soil formation.
- ③ The rate of soil formation in farmlands is faster than that of soil erosion.
- ④ Iowa has maintained its top soil in the last 150 years.

Whether you've been traveling, focusing on your family, or going through a busy season at work, 14 days out of the gym takes its toll—not just on your muscles, but your performance, brain, and sleep, too. ① Most experts agree that after two weeks, you're in trouble if you don't get back in the gym. “At the two week point without exercising, there are a multitude of physiological markers that naturally reveal a reduction of fitness level,” says Scott Weiss, a New York-based exercise physiologist and trainer who works with elite athletes. ② After all, despite all of its abilities, the human body (even the fit human body) is a very sensitive system and physiological changes (muscle strength or a greater aerobic base) that come about through training will simply disappear if your training load dwindles, he notes. Since the demand of training isn't present, your body simply slinks back toward baseline. ③ More protein is required to build more muscles at a rapid pace in your body. ④ Of course, how much and how quickly you'll decondition depends on a slew of factors like how fit you are, your age, and how long sweating has been a habit. “Two to eight months of not exercising at all will reduce your fitness level to as if you never exercised before,” Weiss notes.

Before the fifteenth century, all four characteristics of the witch (night flying, secret meetings, harmful magic, and the devil's pact) were ascribed individually or in limited combination by the church to its adversaries, including Templars, heretics, learned magicians, and other dissident groups. Folk beliefs about the supernatural emerged in peasant confessions during witch trials. The most striking difference between popular and learned notions of witchcraft lay in the folk belief that the witch had innate supernatural powers not derived from the devil. For learned men, this bordered on heresy. Supernatural powers were never human in origin, nor could witches derive their craft from the tradition of learned magic, which required a scholarly training at the university, a masculine preserve at the time. A witch's power necessarily came from the pact she made with the devil.

- ① The folk and learned men had different views on the source of the witch's supernatural powers.
- ② According to the folk belief, supernatural powers belonged to the essential nature of the witch.
- ③ Four characteristics of the witch were attributed by the church to its dissident groups.
- ④ Learned men believed that the witch's power came from a scholarly training at the university.

Fear and its companion pain are two of the most useful things that men and animals possess, if they are properly used. If fire did not hurt when it burnt, children would play with it until their hands were burnt away. Similarly, if pain existed but fear did not, a child would burn himself again and again, because fear would not warn him to keep away from the fire that had burnt him before. A really fearless soldier—and some do exist—is not a good soldier, because he is soon killed; and a dead soldier is of no use to his army. Fear and pain are therefore two guards without which human beings and animals might soon die out.

London taxi drivers have to undertake years of intense training known as “the knowledge” to gain their operating license, including learning the layout of over twenty-five thousand of the city’s streets. A researcher and her team investigated the taxi drivers and the ordinary people. The two groups were asked to watch videos of routes unfamiliar to them through a town in Ireland. They were then asked to take a test about the video that included sketching out routes, identifying landmarks, and estimating distances between places. Both groups did well on much of the test, but the taxi drivers did significantly better on identifying new routes. Novelty-induced time expansion is a well-characterized phenomenon which can be investigated under laboratory conditions. Simply asking people to estimate the length of time they are exposed to a train of stimuli shows that novel stimuli simply seem to last longer than repetitive or unremarkable ones. In fact, just being the first stimulus in a moderately repetitive series appears to be sufficient to induce subjective time expansion. Of course, it is easy to think of reasons why our brain has evolved to work like this—presumably novel and exotic stimuli require more thought and consideration than familiar ones, so it makes sense for the brain to allocate them more subjective time.

- ① Response to stimuli is an important by-product of brain training.
- ② The intensity of stimuli increases with their repetition.
- ③ Our physical response to stimuli influences our thoughts.
- ④ New stimuli give rise to subjective time expansion.

One of the tricks our mind plays is to highlight evidence which confirms what we already believe. If we hear gossip about a rival, we tend to think “I knew he was a nasty piece of work”; if we hear the same about our best friend, we’re more likely to say “that’s just a rumour.” Once you learn about this mental habit—called confirmation bias—you start seeing it everywhere. This matters when we want to make better decisions. Confirmation bias is OK as long as we’re right, but all too often we’re wrong, and we only pay attention to the deciding evidence when it’s too late. How _____ depends on our awareness of why, psychologically, confirmation bias happens. There are two possible reasons. One is that we have a blind spot in our imagination and the other is we fail to ask questions about new information.

- ① we make our rivals believe us
- ② our blind spot helps us make better decisions
- ③ we can protect our decisions from confirmation bias
- ④ we develop exactly the same bias

A story that is on the cutting edge of modern science began in an isolated part of northern Sweden in the 19th century. ① This area of the country had unpredictable harvests through the first half of the century. In years that the harvest failed, the population went hungry. However, the good years were very good. ② The same people who went hungry during bad harvests overate significantly during the good years. A Swedish scientist wondered about the long-term effects of these eating patterns. He studied the harvest and health records of the area. He was astonished by what he found. ③ Boys who overate during the good years produced children and grandchildren who died about six years earlier than the children and grandchildren of those who had very little to eat. Other scientists found the same result for girls. ④ Both boys and girls benefited greatly from the harvests of the good years. The scientists were forced to conclude that just one reason of overeating could have a negative impact that continued for generations.

There is a basic principle that distinguishes a hot medium like radio from a cool one like the telephone, or a hot medium like the movie from a cool one like TV. A hot medium is one that extends one single sense in "high definition." High definition is the state of being well filled with data. A photograph is visually "high definition." A cartoon is "low definition," simply because very little visual information is provided. Telephone is a cool medium, or one of low definition, because the ear is given a meager amount of information. And speech is a cool medium of low definition, because so little is given and so much has to be filled in by the listener. On the other hand, hot media do not leave so much to be filled in or completed by the audience.

- ① Media can be classified into hot and cool.
- ② A hot medium is full of data.
- ③ Telephone is considered high definition.
- ④ Cool media leave much to be filled in by the audience.

December usually marks the start of humpback whale season in Hawaii, but experts say the animals have been slow to return this year. The giant whales are an iconic part of winter on the islands and a source of income for tour operators. But officials at the Humpback Whale Marine Sanctuary said they've been getting reports that the whales have been difficult to spot so far. "One theory was that something like this happened as whales increased. It's a product of their success. With more animals, they're competing against each other for food resources, and it takes an energy of reserve to make the long trip back," said Ed Lyman, a Maui-based resource protection manager and response coordinator for the sanctuary. He was surprised by how few of the animals he saw while responding to a call about a distressed calf on Christmas Eve, saying "We've just seen a handful of whales." It will be a while before officials have hard numbers because the annual whale counts don't take place until the last Saturday of January, February and March, according to former sanctuary co-manager Jeff Walters.

- ① Humpback whale season in Hawaii normally begins at the end of the year.
- ② Humpback whales are profitable for tour operators in Hawaii.
- ③ The drop in the number of humpback whales spotted in Hawaii may be due to their success.
- ④ The number of humpback whales that have returned to Hawaii this whale season has been officially calculated.

It is easy to look at the diverse things people produce and to describe their differences. Obviously a poem is not a mathematical formula, and a novel is not an experiment in genetics. Composers clearly use a different language from that of visual artists, and chemists combine very different things than do playwrights. To characterize people by the different things they make, however, is to miss the universality of how they create. For at the level of the creative process, scientists, artists, mathematicians, composers, writers, and sculptors use a common set of what we call "tools for thinking," including emotional feelings, visual images, bodily sensations, reproducible patterns, and analogies. And all imaginative thinkers learn to translate ideas generated by these subjective thinking tools into public languages to express their insights, which can then give rise to new ideas in others' minds.

There is one true answer that fits at all times and all circumstances. Foxes, for whom Berlin had greater sympathy, have a variegated take on the world, which prevents them from _____. 문 20. 다음 글에서 Locke의 주장으로 가장 적절한 것은?

In Locke's defense of private property, the significant point is what happens when we mix our labor with God's land. We add value to the land by working it; we make fertile what once lay fallow. In this sense, it is our labor that is the source of the value, or the added value, of the land. This value-creating power of my labor makes it right that I own the piece of land which I have made valuable by clearing it, the well I have made full by digging it, the animals I have raised and fattened. With Locke, *Homo faber*—the man of labor—becomes for the first time in the history of political thought a central rather than peripheral figure. In Locke's world, status and honor still flowed to the aristocrats, who were entitled to vast landholdings but were letting history pass them by precisely because new economic realities were in the process of shifting wealth to a bourgeoisie that actually created value by work. In time, Locke's elevation of the significance of labor was bound to appeal to the rising bourgeoisie.

- ① Ownership of property comes from labor.
- ② Labor is the most important ideal to aristocratic society.
- ③ The accumulation of private property is a source of happiness.
- ④ A smooth transition to bourgeois society is essential for social progress.

Achievements show you have something to give, not just something to take. In life, it certainly helps to know the right people. My face turned white as a sheet. I looked at my watch. The tests would be almost over by now. I arrived at the testing center in an absolute panic. I tried to tell my story, but my sentences and descriptive gestures got so confused that I communicated nothing more than a very convincing version of a human tornado. In an effort to curb my distracting explanation, the proctor led me to an empty seat and put a test booklet in front of me. He looked doubtfully from me to the clock, and then he walked away. I tried desperately to make up for lost time, scrambling madly through analogies and sentence completions. "Fifteen minutes remain," the voice of doom declared from the front of the classroom. Algebraic equations, arithmetic calculations, geometric diagrams swam before my eyes. "Time! Pencils down, please."

The secret of successful people is usually that they are able to concentrate totally on one thing. Even if they have a lot in their head, they have found a method that the many commitments don't impede each other, but instead they are brought into a good inner order. And this order is quite simple: _____. In theory, it seems to be quite clear, but in everyday life it seems rather different. You might have tried to decide on priorities, but you have failed because of everyday trivial matters and all the unforeseen distractions. Separate off disturbances, for example, by escaping into another office, and not allowing any distractions to get in the way. When you concentrate on the one task of your priorities, you will find you have energy that you didn't even know you had.

With the help of the scientist, the commercial fishing industry has found out that its fishing must be done scientifically if it is to be continued. With no fishing pressure on a fish population, the number of fish will reach a predictable level of abundance and stay there. The only fluctuation would be due to natural environmental factors, such as availability of food, proper temperature, and the like. If a fishery is developed to take these fish, their population can be maintained if the fishing harvest is small. The mackerel of the North Sea is a good example. If we increase the fishery and take more fish each year, we must be careful not to reduce the population below the ideal point where it can replace all of the fish we take out each year. If we fish at this level, called the *maximum sustainable yield*, we can maintain the greatest possible yield, year after year. If we catch too many, the number of fish will decrease each year until we fish ourselves out of a job. Examples of severely overfished animals are the blue whale of the Antarctic and the halibut of the North Atlantic. Fishing just the correct amount to maintain a maximum annual yield is both a science and an art. Research is constantly being done to help us better understand the fish population and how to utilize it to the maximum without depleting the population.

If terrorism is a form of theater where you want a lot of people watching, no event in human history was likely ever seen by a larger global audience than the 9/11 attacks. At the time, there was much discussion about how 9/11 was like the attack on Pearl Harbor. They were indeed similar since they were both surprise attacks that drew America into significant wars. We entered a new phase as a species when Chinese scientists altered a human embryo to remove a potentially fatal blood disorder — not only from the baby, but all of its descendants. Researchers call this process "germline modification." The media likes the phrase "designer babies." But we should call it what it is, "eugenics." And we, the human race, need to decide whether or not we want to use it. Last month, in the United States, the scientific establishment weighed in. A National Academy of Sciences and National Academy of Medicine joint committee endorsed embryo editing aimed at genes that cause serious diseases when there is "no reasonable alternative." But it was more wary of editing for "enhancement," like making already-healthy children stronger or taller. It recommended a public discussion, and said that doctors should "not proceed at this time." The committee had good reason to urge caution. The history of eugenics is full of oppression and misery.

※ eugenics: 우생학

- ① Doctors were recommended to immediately go ahead with embryo editing for enhancement.
- ② Recently, the scientific establishment in the U.S. joined a discussion on eugenics.
- ③ Chinese scientists modified a human embryo to prevent a serious blood disorder.

The ancient Olympics provided athletes an opportunity to prove their fitness and superiority, just like our modern games. (①) The ancient Olympic events were designed to eliminate the weak and glorify the strong. Winners were pushed to the brink. (②) Just as in modern times, people loved extreme sports. One of the favorite events was added in the 33rd Olympiad. This was the pankration, or an extreme mix of wrestling and boxing. The Greek word *pankration* means "total power." The men wore leather straps with metal studs, which could make a terrible mess of their opponents. (③) This dangerous form of wrestling had no time or weight limits. In this event, only two rules applied. First, wrestlers were not allowed to gouge eyes with their thumbs. Secondly, they could not bite. Anything else was considered fair play. The contest was decided in the same manner as a boxing match. Contenders continued until one of the two collapsed. (④) Only the strongest and most determined athletes attempted this event. Imagine wrestling "Mr. Fingertips," who earned his nickname by breaking his opponents' fingers!

In our time it is not only the law of the market which has its own life and rules over man, but also the development of science and technique. For a number of reasons, the problems and organization of science today are such that a scientist does not choose his problems; the problems force themselves upon the scientist. He solves one problem, and the result is not that he is more secure or certain, but that ten other new problems open up in place of the single solved one. They force him to solve them; he has to go ahead at an ever-quickening pace. The same holds true for industrial techniques. The pace of science forces the pace of technique. Theoretical physics forces atomic energy on us; the successful production of the fission bomb forces upon us the manufacture of the hydrogen bomb. We do not choose our problems, we do not choose our products; we are pushed, we are forced — by what? By a system which has no purpose and goal transcending it, and which _____.

Prehistoric societies some half a million years ago did not distinguish sharply between mental and physical disorders. Abnormal behaviors, from simple headaches to convulsive attacks, were attributed to evil spirits that inhabited or controlled the afflicted person's body. According to historians, these ancient peoples attributed many forms of illness to demonic possession, sorcery, or the behest of an offended ancestral spirit. Within this system of belief, called *demonology*, the victim was usually held at least partly responsible for the misfortune. It has been suggested that Stone Age cave dwellers may have treated behavior disorders with a surgical method called *trephining*, in which part of the skull was chipped away to provide an opening through which the evil spirit could escape. People may have believed that when the evil spirit left, the person would return to his or her normal state. Surprisingly, trephined skulls have been found to have healed over, indicating that some patients survived this extremely crude operation.

※ convulsive: 경련의

As the digital revolution upends newsrooms across the country, here's my advice for all the reporters. I've been a reporter for more than 25 years, so I have lived through a half dozen technological life cycles. The most dramatic transformations have come in the last half dozen years. That means I am, with increasing frequency, making stuff up as I go along. Much of the time in the news business, we have no idea what we are doing. We show up in the morning and someone says, "Can you write a story about (pick one) tax policy/immigration/climate change?" When newspapers had once-a-day deadlines, we said a reporter would learn in the morning and teach at night — write a story that could inform tomorrow's readers on a topic the reporter knew nothing about 24 hours earlier. Now it is more like learning at the top of the hour and teaching at the bottom of the same hour. I'm also running a political podcast, for example, and during the presidential conventions, we should be able to use it to do real-time interviews anywhere. I am just increasingly working without a script.

In the nineteenth century, the most respected health and medical experts all insisted that diseases were caused by "miasma," a fancy term for bad air. Western society's system of health was based on this assumption: to prevent diseases, windows were kept open or closed, depending on whether there was more miasma inside or outside the room; it was believed that doctors could not pass along disease because gentlemen did not inhabit quarters with bad air. Then the idea of germs came along. One day, everyone believed that bad air makes you sick. Then, almost overnight, people started realizing there were invisible things called microbes and bacteria that were the real cause of diseases. This new view of disease brought sweeping changes to medicine, as surgeons adopted antiseptics and scientists invented vaccines and antibiotics. But, just as momentarily, the idea of germs gave ordinary people the power to influence their own lives. Now, if you wanted to stay healthy, you could wash your hands, boil your water, cook your food thoroughly, and clean cuts and scrapes with iodine.

- ① In the nineteenth century, opening windows was irrelevant to the density of miasma.
- ② In the nineteenth century, it was believed that gentlemen did not live in places with bad air.
- ③ Vaccines were invented after people realized that microbes and bacteria were the real cause of diseases.
- ④ Cleaning cuts and scrapes could help people to stay healthy.

Followers are a critical part of the leadership equation, but their role has not always been appreciated. For a long time, in fact, "the common view of leadership was that leaders actively led and subordinates, later called followers, passively and obediently followed." Over time, especially in the last century, social change shaped people's views of followers, and leadership theories gradually recognized the active and important role that followers play in the leadership process. Today it seems natural to accept the important role followers play. One aspect of leadership is particularly worth noting in this regard: Leadership is a social influence process shared among all members of a group. Leadership is not restricted to the influence exerted by someone in a particular position or role; followers are part of the leadership process, too.

- ① For a length of time, it was understood that leaders actively led and followers passively followed.
- ② People's views of subordinates were influenced by social change.
- ③ The important role of followers is still denied today.
- ④ Both leaders and followers participate in the leadership process.

Their suggested approach, labeled as "Mediating Assessments Protocol," or MAP, has a simple goal: To put off gut-based decision-making until a choice can be informed by a number of separate factors. "One of the essential purposes of MAP is basically to _____ intuition," Kahneman said in a recent interview with *The Post*. This version of the touchscreen is known as a resistive screen because the screen reacts to pressure from the finger. Other tablet computers feature a single electrified metallic layer under the glass panel. When the user touches the screen, some of the current passes through the glass into the user's finger. All of us inherit something: in some cases, it may be money, property or some object—a family heirloom such as a grandmother's wedding dress or a father's set of tools. But beyond that, all of us inherit something else, something _____, something we may not even be fully aware of. It may be a way of doing a daily task, or the way we solve a particular problem or decide a moral issue for ourselves. It may be a special way of keeping a holiday or a tradition to have a picnic on a certain date. It may be something important or central to our thinking, or something minor that we have long accepted quite casually.

- ② against our moral standards

Evolutionarily, any species that hopes to stay alive has to manage its resources carefully. That means that first call on food and other goodies goes to the breeders and warriors and hunters and planters and builders and, certainly, the children, with not much left over for the seniors, who may be seen as consuming more than they're contributing. But even before modern medicine extended life expectancies, ordinary families were including grandparents and even great-grandparents. That's because what old folk consume materially, they give back behaviorally—providing a leveling, reasoning center to the tumult that often swirls around them.

- ① Seniors have been making contributions to the family.
- ② Modern medicine has brought focus to the role of old folk.
- ③ Allocating resources well in a family determines its prosperity.
- ④ The extended family comes at a cost of limited resources.

Nowadays the clock dominates our lives so much that it is hard to imagine life without it. Before industrialization, most societies used the sun or the moon to tell the time.

- (A) For the growing network of railroads, the fact that there were no time standards was a disaster. Often, stations just some miles apart set their clocks at different times. There was a lot of confusion for travelers.
- (B) When mechanical clocks first appeared, they were immediately popular. It was fashionable to have a clock or a watch. People invented the expression “of the clock” or “o'clock” to refer to this new way to tell the time.
- (C) These clocks were decorative, but not always useful. This was because towns, provinces, and even neighboring villages had different ways to tell the time. Travelers had to reset their clocks repeatedly when they moved from one place to another. In the United States, there were about 70 different time zones in the 1860s.

But there is also clear evidence that millennials, born between 1981 and 1996, are saving more aggressively for retirement than Generation X did at the same ages, 22 ~ 37.

Millennials are often labeled the poorest, most financially burdened generation in modern times. Many of them graduated from college into one of the worst labor markets the United States has ever seen, with a staggering load of student debt to boot. ① Not surprisingly, millennials have accumulated less wealth than Generation X did at a similar stage in life, primarily because fewer of them own homes. ② But newly available data providing the most detailed picture to date about what Americans of different generations save complicates that assessment. ③ Yes, Gen Xers, those born between 1965 and 1980, have a higher net worth. ④ And that might put them in better financial shape than many assume.

Carbonate sands, which accumulate over thousands of years from the breakdown of coral and other reef organisms, are the building material for the frameworks of coral reefs. But these sands are sensitive to the chemical make-up of sea water. As oceans absorb carbon dioxide, they acidify—and at a certain point, carbonate sands simply start to dissolve. The world's oceans have absorbed around one-third of human-emitted carbon dioxide. The rate at which the sands dissolve was strongly related to the acidity of the overlying seawater, and was ten times more sensitive than coral growth to ocean acidification. In other words, ocean acidification will impact the dissolution of coral reef sands more than the growth of corals. This probably reflects the corals' ability to modify their environment and partially adjust to ocean acidification, whereas the dissolution of sands is a geochemical process that cannot adapt.

- ① The frameworks of coral reefs are made of carbonate sands.
- ② Corals are capable of partially adjusting to ocean acidification.
- ③ Human-emitted carbon dioxide has contributed to the world's ocean acidification.
- ④ Ocean acidification affects the growth of corals more than the dissolution of coral reef sands.

The definition of 'turn' casts the digital turn as an analytical strategy which enables us to focus on the role of digitalization within social reality. As an analytical perspective, the digital turn makes it possible to analyze and discuss the societal meaning of digitalization. The term 'digital turn' thus signifies an analytical approach which centers on the role of digitalization within a society. If the linguistic turn is defined by the epistemological assumption that reality is constructed through language, the digital turn is based on the assumption that social reality is increasingly defined by digitalization. Social media symbolize the digitalization of social relations. Individuals increasingly engage in identity management on social networking sites(SNS). Women are experts at gossiping, and they always talk about trivial things, or at least that’s what men have always thought. However, some new research suggests that when women talk to women, their conversations are far from frivolous, and cover many more topics (up to 40 subjects) than when men talk to other men. Women’s conversations range from health to their houses, from politics to fashion, from movies to family, from education to relationship problems, but sports are notably absent. Men tend to have a more limited range of subjects, the most popular being work, sports, jokes, cars, and women. According to Professor Petra Boynton, a psychologist who interviewed over 1,000 women, women also tend to move quickly from one subject to another in conversation, while men usually stick to one subject for longer periods of time. At work, this difference can be an advantage for men, as they can put other matters aside and concentrate fully on the topic being discussed. On the other hand, it also means that they sometimes find it hard to concentrate when several things have to be discussed at the same time in a meeting.

"In Judaism, we're largely defined by our actions," says Lisa Grushcow, the senior rabbi at Temple Emanu-El-Beth Sholom in Montreal. "You can't really be an armchair do-gooder." This concept relates to the Jewish notion of tikkun olam, which translates as "to repair the world." Our job as human beings, she says, "is to mend what's been broken. It's incumbent on us to not only take care of ourselves and each other but also to build a better world around us." This philosophy conceptualizes goodness as something based in service. Instead of asking "Am I a good person?" you may want to ask "What good do I do in the world?" Grushcow's temple puts these beliefs into action inside and outside their community. One of the areas where efficiency can be optimized is the work force, through increasing individual productivity—defined as the amount of work (products produced, customers served) an employee handles in a given time. In addition to making sure you have invested in the right equipment, environment, and training to ensure optimal performance, you can increase productivity by encouraging staffers to put an end to a modern-day energy drain: multitasking. Studies show it takes 25 to 40 percent longer to get a job done when you're simultaneously trying to work on other projects. In many Catholic countries, children are often named after saints; in fact, some priests will not allow parents to name their children after soap opera stars or football players. Protestant countries tend to be more free about this; however, in Norway, certain names such as Adolf are banned completely. In countries where infant mortality is very high, such as in Africa, tribes only name their children when they reach five years old, the age in which their chances of survival begin to increase. Until that time, they are referred to by the number of years they are. Many nations in the Far East give their children a unique name which in some way describes the circumstances of the child's birth or the parents' expectations and hopes for the child. Some Australian aborigines can keep changing their name throughout their life as the result of some important experience which has in some way proved their wisdom, creativity or determination. Duration shares an inverse relationship with frequency. If you see a friend frequently, then the duration of the encounter will be shorter. Conversely, if you don't see your friend very often, the duration of your visit will typically increase significantly. (A), if you see a friend every day, the duration of your visits can be low because you can keep up with what's going on as events unfold. If, however, you only see your friend twice a year, the duration of your visits will be greater. Think back to a time when you had dinner in a restaurant with a friend you hadn't seen for a long period of time. You probably spent several hours catching up on each other's lives. The duration of the same dinner would be considerably shorter if you saw the person on a regular basis. (B), in romantic relationships the frequency and duration are very high because couples, especially newly minted ones, want to spend as much time with each other as possible. The intensity of the relationship will also be very high.

As a roller coaster climbs the first lift hill of its track, it is building potential energy—the higher it gets above the earth, the stronger the pull of gravity will be. When the coaster crests the lift hill and begins its descent, its potential energy becomes kinetic energy, or the energy of movement. A common misperception is that a coaster loses energy along the track. An important law of physics, however, called the law of conservation of energy, is that energy can never be created nor destroyed. It simply changes from one form to another. Whenever a track rises back uphill, the cars' momentum—their kinetic energy—will carry them upward, which builds potential energy, and roller coasters repeatedly convert potential energy to kinetic energy and back again. At the end of a ride, coaster cars are slowed down by brake mechanisms that create _____ between two surfaces. This motion makes them hot, meaning kinetic energy is changed to heat energy during braking. Riders may mistakenly think coasters lose energy at the end of the track, but the energy just changes to and from different forms.
