문 13.

Suddenly finding yourself in a strange country can be rather frightening. You lose all of the props that generally support you, and all of the familiar cues that provide information about what to do. Without familiar props and cues to orient you in unfamiliar situations, it becomes difficult to _____ life in a new setting. Everything can seem different. You don't even know how much to tip a cab driver or a waiter in a restaurant. In this situation, you can lose a sense of logic, developing irrational fear of the local people.

- ① give in
- ② make up for
- ③ cope with
- ④ get away from

문 14.

People who are happy don't get everything they want, but they want most of what they can get. In other words, they rig the game in their favor by choosing to value things that are within their grasp. People who find themselves dissatisfied in life often set unreachable goals for themselves, setting themselves up to fail. Yet people who set high goals for themselves and try to reach them are no happier than people who set and reach more modest goals. _____

- ① Aim high and try to reach it.
- ② Take whatever comes your way.
- ③ Don't get frustrated when you fail.
- ④ Stay within reality and strive to make things better.

문 15.

In the field of intercultural communication, I learned that the position of the bodies of people in conversation varies with the culture. It used to puzzle me that a special Arab friend seemed unable to walk and talk at the same time. After years in the US, he could not bring himself to stroll along, facing forward while talking. Our progress would be arrested while he edged ahead, cutting slightly in front of me and turning sideways so we could see each other. Once in this position, he would stop. His behavior was explained when I learned that for the Arabs to view the other person _____ is regarded as impolite.

- ① angrily
- ② closely
- ③ straightly
- ④ peripherally

문 16.

According to some experts, we are leaving our children and grandchildren a frightening inheritance: an increased accumulation of so-called greenhouse gases in the atmosphere and the potentially disastrous climate changes that this increase may bring about. However, the scientific community _____. Other scientists claim that the evidence for global warming is inconclusive and argue that predictions based on it are questionable. The scientific debate has been intense. It has also fueled a political controversy about what measures, if any, should be taken to address the possible problem of climate changes.

- ① is not speaking with one voice
- ② has suggested many practical ideas
- ③ is concerned about the climate change
- ④ worries about the misuse of scientific discovery

문 17.

"They say best men are molded out of faults," wrote Shakespeare in *Measure for Measure*, "and, for the most, become much more the better for being a little bad." Thus, each goof-up can be seen as a prime opportunity for self-improvement. Indeed, the bigger the blooper, the better its chance of helping you become a better person — if you know how to make amends.

- ① Everyone makes mistakes.
- ② Try not to commit a fault.
- ③ Knowing how to make amends is not a big deal.
- ④ People may learn through what they've done wrong.

문 18.

Among the many physical risks facing astronauts sent to the Moon or Mars, the biggest danger will be the least visible: radiation. This is nuclear particles that arrive at almost light speed from beyond the Solar System. The particles slice through strands of DNA, boosting the risk of cancer and other ailments. A 2001 NASA study found that at least 39 former astronauts suffered cataracts after flying in space, 36 of whom took part in high-radiation missions such as the Apollo landings.

- ① many types of space missions
- ② the danger of radiation to astronauts
- ③ diverse medical problems of astronauts
- ④ the effect of nuclear particles on spaceships

문 19. 다음 글의 내용과 일치하지 않는 것은?

Humans have always been fascinated by dreams. The vivid dreams people remember and talk about are REM dreams — the type that occurs almost continuously during periods of rapid eye movement (REM) during sleep. But people also have NREM dreams — dreams that occur during periods without rapid eye movement — although they are typically less frequent and less memorable than REM dreams. REM dreams have a story-like or dream-like quality and are more visual, vivid, and emotional than NREM dreams. Interestingly, blind people who lose their sight before age five usually do not have visual dreams, but they have vivid dreams involving the other senses. A popular belief about dreams is that an entire dream takes place in an instant, but in fact, it is not true. Sleep researchers have discovered that it takes about as long to dream a dream as it would to experience the same thing in real life.

- ① REM dreams are usually easy to remember.
- ② Human dreams usually occur in an instant.
- ③ Even a 4-year-old blind boy can have vivid dreams.
- ④ REM dreams take place more often than NREM dreams.

문 20. 다음 글을 가장 잘 요약한 것은?

Everyone worries at one time or another. It is a part of our every day lives. We worry about deadlines, about financial problems, and about our relationships with others. Surprisingly, the fact is that worrying is not always a bad thing. Some amount of worry is necessary because it gives us time to concentrate on a problem and find possible solutions or ways to deal with it. Some worry is stimulating. It can propel you to do better work or to complete work on time. In other cases, however, our worries can interfere with our problem-solving abilities. We worry so much that it stops us from taking the steps needed to solve the problem. If it continues, worrying can take away our energy and lead to physical problems such as fatigue, headaches, muscle pain, and insomnia.

- ① Some amount of worry can be useful.
- ② Worry has both positive and negative effects on us.
- ③ Worry can bring about a variety of problems to our body.
- ④ Too much worry may keep us from concentrating on our problems.

문 11. 다음 글의 밑줄 친 부분의 뜻으로 가장 적절한 것은?

When Jesse and Rachel got married, they knew they wanted to live in a traditional nuclear family — mother, father, and biological children. Each of them had come from other family arrangements, and they had decided that a more traditional arrangement was what they wanted. Rachel had been born out of wedlock. Because her parents had never married, she had never met her biological father. Jesse's mother had been widowed. His father's early death made Jesse want to have a large family.

- ① rich ② illegitimate
③ divorced ④ handicapped

문 12. 다음 글의 Broom jumping에 관한 내용과 일치하지 않는 것은?

Broom jumping is most famous in the United States as an African-American wedding custom. The broom holds spiritual significance for many African people, representing the beginning of homemaking for a couple. The ritual itself in America was created during slavery. Because slaves could not legally marry, they created their own ways to honor their unions. Broom jumping is a ritual in which the bride and the groom, either at the ceremony or at the reception, signify their entrance into a new life and their creation of a new family by symbolically sweeping away of their former single lives, and jumping over the broom to enter upon a new adventure as wife and husband.

- ① It is a well-known African-American wedding custom.
② Its origin traces back to the period of slavery in America.
③ It was performed by the slaves who got legally married.
④ It signifies the union of the bride and the groom and their entrance into a new life.

문 13. 다음 글의 내용과 일치하는 것은?

Upstate New York florist Patricia Woysher has been in the business for forty years. She's sold flowers to tens of thousands of folks in the area and even received one of the best assignments a florist could hope for, decorating the White House for the Christmas season. "I had to take a deep breath. I mean, you see pictures of the place all your life, then one day you're in the Oval Office." Despite the excitement, Patricia's focus remained on her day-to-day concerns. "Doing the White House was exciting and rewarding, but my job is to run my business. I want to have something here that will last forever, that I can pass on to my children."

- ① Patricia runs a flower shop in the White House.
② Patricia was invited to the White House for a party.
③ Patricia worked for the White House and forgot her daily routines.
④ Patricia hopes to turn her business over to her offspring.

문 14. 다음 글의 빈칸 (㉠), (㉡)에 들어갈 말로 적절한 것은?

It is a great nuisance that knowledge cannot be acquired without trouble. It can only be acquired by hard work. It would be fine if we could swallow the powder of profitable information made palatable by the jam of fiction. But the truth is that, so made palatable, we cannot be sure that the powder will be profitable. I suggest to you that the knowledge the novelist imparts is (㉠) and thus (㉡) and it is better not to know a thing at all than to know it in a distorted fashion. If readers wish to inform themselves of the pressing problems of the day, they will do better to read, not novels but the books that specifically deal with them. I suggest to you that it is enough for a novelist to be a good novelist. It is unnecessary for him to be a prophet, a politician or a leader of thought. Fiction is an art and the purpose of art is to please.

- (㉠) (㉡)
① reasonable believable
② naive wholesome
③ biased unreliable
④ impartial realistic

[문 15 ~ 문 16]

문 15.

Two men were dining together in a restaurant. The first man ordered the food. The second man, who was unaccustomed to eating out, said nothing. When the food arrived, the second man _____ everything his friend did. When the first man took rice, so did the second. The first man ate a shrimp, and so did the second man. Finally, the first man took a toothpick, and his friend did the same. Later the first man asked his friend how he had enjoyed the meal. The second man answered, "Everything was perfect, except for the last bit. It tasted like bamboo."

- ① copied ② cursed
③ ignored ④ opposed

문 16.

A Western-style conversation between two people is like a game of tennis. If I introduce a topic, a conversational ball, I expect you to hit it back. If you agree with me, I don't expect you simply to agree and do nothing more. I expect you to add something — a reason for agreeing, another example, or an elaboration to carry the idea further. But I don't expect you always to agree. I am just as happy if you question me, or challenge me, or completely disagree with me. Whether you agree or disagree, _____.

- ① you'll be playing the wrong game
② your response will return the ball to me
③ you'll learn a new lesson from your experience
④ your conversation style will differ from the Western style

문 17. 다음 글의 요지로 가장 적절한 것은?

A cause always has an effect, and an effect has a cause. Often, however, in searching for the cause or effect of an act, we jump to conclusions. If John Wilkins, who is big and strong, doesn't go out for the football team, some pupils say, "Wilkins has no courage." Perhaps the real reason is that his parents object, he is behind in his school work and can't afford the time, or he believes that football is not worth playing.

- ① Easy come, easy go.
- ② Don't be dejected, take courage.
- ③ Everybody has his own talent.
- ④ Don't make a hasty judgment.

문 18. 주어진 문장으로 시작하여, 다음 글들을 문맥에 맞게 올바른 순서로 연결한 것은?

The saying for which I had to find the meaning was: "People who live in glass houses shouldn't throw stones."

- (A) My first guess was that it was about a situation in which those who want to fight should first think about defending themselves from attack. Obviously, a person whose house is made of glass, which is easily broken, should be careful. If you throw a stone, the person at whom you threw the stone could throw it back and smash your house.
- (B) I think this is good advice for anyone who is critical of other people.
- (C) However, this saying, whose meaning I looked up in a dictionary of English idioms is not really about fighting. It means that you should not criticize others for faults similar to those you have.

- ① A - C - B ② A - B - C
- ③ B - C - A ④ C - A - B

문 19. 다음 주어진 문장이 들어갈 곳으로 가장 적절한 것은?

Such variation, however, was common then with the spelling of many words, not just names.

William Shakespeare is rightly regarded as one of the world's great writers; yet it would seem that he couldn't spell his own name! (㉠) Samples of his signature that have survived show his name spelled in several different ways. (㉡) Not until the eighteenth century when dictionaries came into use was a single spelling for each word accepted as correct. (㉢) A few words, however, escaped being standardized in this way; 'instill' (which can also be spelled 'instil') is one of them. (㉣) When a dictionary gives two different spellings of a word, the one given first is preferred.

- ① ㉠ ② ㉡
- ③ ㉢ ④ ㉣

문 20. 다음 글의 제목으로 가장 적절한 것은?

The term home schooling or home tuition, as it is called in England, means educating children at home or in places other than a mainstream setting such as a public or private school. There are many reasons why parents choose home schooling for their children. Some parents are dissatisfied with the quality of education in the public schools. Others do not want their children to have to worry about "peer pressure," or social pressure from friends. They say it may interfere with the child's studies. These parents fear this type of pressure will lead to negative behavior such as smoking, drinking alcohol, and taking drugs.

- ① Types of Pressure in Schools
- ② Pros and Cons of Home Schooling
- ③ Side Effects of Home Schooling
- ④ Reasons for Home Schooling

문 12.

For the Greeks, beauty was a virtue: a kind of excellence. If it occurred to the Greeks to distinguish between a person's "inside" and "outside," they still expected that inner beauty would be matched by beauty of the other kind. The well-born young Athenians who gathered around Socrates found it quite _____ that their hero was so intelligent, so brave, so honorable, so seductive — and so ugly.

- ① natural ② essential
③ paradoxical ④ self-evident

문 13.

We should behave towards our country as women behave towards the men they love. A loving wife will do anything for her husband except to stop criticizing and trying to improve him. That is the right attitude for a citizen. We should cast the same affectionate but sharp glance at our country. We should love it, but also insist upon telling it all its faults. The dangerous man is not the (A)_____, but the noisy empty (B)_____ who encourages us to indulge in orgies of self-congratulation.

- (A) (B)
① critic patriot
② citizen leader
③ extrovert introvert
④ Democrat Republican

문 14.

Thank you for inviting me to speak to you today. I'd like to take this opportunity to tell you about our Silver Service activities and why we believe it is important for everyone to be involved in helping the elderly in our community. Did you know that one in every six people over the age of 60 in this community needs some kind of help in his or her home? Those of us who have experience in this kind of work know that our small "investments" in time and effort are nothing compared to the kind of satisfaction and fulfillment we get in return.

Fortunately, psychologists believe that books can serve as therapeutic tools — or at least as effective adjuncts to professional therapy — to help children come to terms with their parents' divorce. According to educator-counselor Joanne Bernstein, stories that confront life's problems with candor and credibility may provide insights, promote self-examination, and lead to changes in attitude and behavior. One way stories accomplish this is through identification. Reading about the grief and anxiety of others, she explains, can arouse sudden awareness as problems that have not been consciously or completely recognized are allowed to surface. Introduced to characters who share their difficulties, children may feel less alienated and thus freer to discuss and resolve their own plight.

- ① Children come to terms with their plight by reading.
② Stories are likely to alienate children from their parents.
③ Books are helpful for children whose parents are divorced.
④ Children identify themselves with characters while reading.

Various fogs are essentially clouds that form at the earth's surface, produced by temperature differences and moisture in the air. As warm, moisture-laden air cools, the amount of moisture that air can contain decreases. Warm air can hold more water vapor than cold air. So if the air is cooled sufficiently it will reach the dew point, at which the moisture begins to gather together out of the air and form water drops, creating fog.

- ① To explain how fog is formed
- ② To describe various types of fog
- ③ To show when warm air affects the fog
- ④ To point out why moisture works in the air

Job-related stress can lead to symptoms of poor physical health such as weight gain, fatigue and illness. Both diet and exercise can contribute to the alleviation of these negative effects of stress. The first step is to eliminate junk food from the diet. Instead of soda or a candy bar, try a piece of fresh fruit. The next step is to make a habit of exercising every day. And you should aim for twenty to thirty minutes of exercise a day. The key is to find a form of exercise that you enjoy. That way, you are more likely to do it every day and will receive the maximum benefit. Both diet and exercise can help you maintain a healthy weight, keep you feeling energized, and protect you from sickness. Then you will be better equipped to deal with the sources of stress at your job.

- ① To prevent weight gain
- ② To explain the causes of stress
- ③ To announce why junk food is bad for the health
- ④ To explain how to ease the negative effects of stress

Dogs have long had special standing in the medical world. Trained to see for the blind, hear for the deaf and move for the immobilized, dogs have become indispensable companions for people with disabilities. However, dogs appear to be far more than four-legged health care workers. One Japanese study found pet owners made 30 percent fewer visits to doctors. A Melbourne study of 6,000 people showed that owners of dogs and other pets had lower cholesterol, blood pressure and heart attack risk compared with people who didn't have pets. Obviously, the better health of pet owners could be explained by a variety of factors, but many experts believe companion animals improve health at least in part by lowering stress.

More and more people are turning away from their doctors and, instead, going to individuals who have no medical training and who sell unproven treatments. They go to quacks to get everything from treatments for colds to cures for cancer. And they are putting themselves in dangerous situations. Many people don't realize how unsafe it is to use unproven treatments. First of all, the treatments usually don't work. They may be harmless, but, if someone uses these products instead of proven treatments, he or she may be harmed. Why? Because during the time the person is using the product, his or her illness may be getting worse. This can even cause the person to die.

- ① Better train should be given to medical students.
- ② Alternative medical treatments can be a great help.
- ③ Don't let yourself become a victim of health fraud.
- ④ In any case, it is alright to hold off going to a doctor for several days.

Some students make the mistake of thinking that mathematics consists solely of solving problems by means of formulas and rules. ① To become successful problem solvers, however, they have to appreciate the theory, recognizing the logical structure and reasoning behind the mathematical methods. ② To do so requires a precision of understanding the exact meaning of a mathematical statement and of expressing thoughts with accuracy and clarity. ③ However, this precision cannot be achieved without real appreciation of the subtleties of language. ④ In fact, anyone can advance much beyond mere problem solving tasks without manipulating mathematical formulas and rules. That is, superior ability in the use of language is a prerequisite to become successful problem solvers.

The sales talk of the old-fashioned businessman was essentially rational. He knew his merchandise, he knew the needs of the customer, and on the basis of this knowledge he tried to sell. To be sure his sales talk was not entirely objective and he used persuasion as much as he could; yet, in order to be efficient, it had to be a rather rational and sensible kind of talk. A vast sector of modern advertising is different; it does not appeal to reason but to emotion; like any other kind of hypnoid suggestion, it tries to impress its customers emotionally and then make them submit intellectually. This type of advertising impresses the customers by all sorts of means such as the repetition of the same formula again and again. All these methods are essentially irrational; they have nothing to do with the qualities of the merchandise, and they suppress and kill the critical capacities of the customers.

- ① Significance of the Sales Talk
- ② Change in Advertising Methods
- ③ Critical Capacities of the Customers
- ④ Importance of Emotional Advertising Slogans

Many of the greatest economic evils of our time are the fruits of risk, uncertainty, and ignorance. It is because particular individuals, fortunate in situation or in abilities, are able to take advantage of uncertainty and ignorance, and also because for the same reason big business is often a lottery, that great inequalities of wealth come about. And these same factors are also the cause of the unemployment of labor, or the disappointment of reasonable business expectations, and of the impairment of efficiency and production. Yet the cure lies outside of the operations of individuals. I believe that the cure for these things is partly to be sought in the deliberate control of the currency and of credit by a central institution, and partly in the collection and dissemination of data relating to the business situation including the full publicity, by law if necessary, of all business facts which it is useful to know. Even if these measures prove insufficient, they will furnish us with better knowledge than we have now for taking the next step.

In the late 20th century, the northern hemisphere experienced its most widespread warmth for 1,200 years, according to the journal *Science*. The findings support evidence pointing to unprecedented recent warming of the climate linked to greenhouse emissions. University of East Anglia(UEA) researchers measured changes in fossil shells, tree rings, ice cores and other past temperature records. They also looked at people's diaries from the last 750 years. Timothy Osborn and Keith Briffa of UEA analysed instrument measurements of temperatures from 1856 onwards to establish the geographic extent of recent warming. Then, they compared this data with evidence dating back as far as AD 800. The analysis confirmed periods of significant warmth in the northern hemisphere from AD 890 to 1170 (the so-called "Medieval Warm Period") and for much colder periods from AD 1580 to 1850 (the "Little Ice Age").

- ① Researchers at UEA examined a variety of materials to check temperature changes.
- ② The Medieval Warm Period was shorter than the Little Ice Age.
- ③ The late 20th century is not the first in history that witnessed a temperature change.
- ④ Greenhouse emissions are considered to be the cause of the recent warming.

Ice wines are becoming increasingly popular across North America. While ice wines have always been fashionable in Western Europe, they were hard to find in North America and often ridiculously expensive. Ice wines are more expensive than other types of wine on account of the temperature requirements to make them. The grapes must be left on the vines until the first frost, after which they are harvested. If the first frost comes too late, the grapes will turn rotten, and the harvest will be lost. Add to that the cost of shipping the wines, and they become rather expensive. However, good quality North American ice wines, produced in California and British Columbia, have recently come onto the market, making ice wines more affordable.

- ① Specific temperature conditions are required to make ice wines.
- ② Ice wines used to be difficult to come by in North America.
- ③ The shipping costs contribute to the high prices of ice wines.
- ④ North America was well-known for its high quality ice wines.

The umbrella is so old that no one knows where it came from – it was invented before man learned how to write. But for thousands of years, the umbrella was used only for protection from the sun, rather than from the rain. The word 'umbrella', in fact, comes from the Latin word 'umbra', which means 'shade', and ancient slaves held umbrellas over their masters to give them shade. At the beginning, umbrellas were carried only by women, for they weren't considered 'manly' enough to be used by men. It wasn't until about 300 years ago that people began to use waterproof umbrellas in the rain.

- ① The umbrella was invented after man learned how to write.
- ② The umbrella was used mainly for protection from the rain.

Euthanasia generally refers to mercy killing, the voluntary ending of the life of someone who is terminally or hopelessly ill. Euthanasia has become a legal, medical and ethical issue over which opinion is divided. Euthanasia can be either active or passive. Active euthanasia means that a physician or other medical personnel takes a deliberate action that will induce death. Passive euthanasia means letting a patient die for lack of treatment or suspending treatment that has begun. A good deal of the controversy about mercy killing stems from the decision-making process. Who decides if a patient is to die? This issue had not been established legally in the United States. The matter is left to state law, which usually allows the physician in charge to suggest the option of death to a patient's relatives, especially if the patient is brain-dead.

The article suggests that euthanasia should be ____.

Taking time to clear your mind through meditation can boost your spirits and your immunity. Psychologist, Richard Davidson, gave 40 people a flu vaccine. Half of them followed a regular meditation schedule for an hour a day, six days a week. The others just got the vaccine. After eight weeks, the meditators had higher levels of flu-fighting antibodies than those who didn't meditate. They were also better able to deal with stress and had increased activity in the area of the brain linked to good moods. Active listeners listen with their ears, their eyes, and their mind. They take in the objective information by listening to the literal words that are spoken. But every spoken message contains more than words. Speakers also communicate subjective information—their feelings and emotions—through other vocal sounds and nonverbal signals. These include verbal intonations such as loudness, emphasis, hesitations, voice movements, facial expressions, body posture, and hand gestures. By listening for feelings and emotions as well as for literal words, you can grasp the total meaning behind the speaker's message. Yet, no matter how good you become at listening for total meaning, there still remains the potential for misunderstanding. That's why the active listener verifies completeness by asking questions. The use of questions can uncover distortions and clarify misunderstandings.

- ② Verbal Skills for Effective Listening
- ③ Importance of Asking Questions in Listening
- ④ Relationship between Listening and Emotions

No matter how satisfying our work is, it is a mistake to rely on work as our only source of satisfaction. Just as humans need a varied diet to supply a variety of needed vitamins and minerals to maintain health, so we need a varied diet of activities that can supply a sense of enjoyment and satisfaction. Some experts suggest that one can start by making an inventory—a list of the things you enjoy doing, your talents and interests, and even new things that you think you might enjoy if you tried them. It may be gardening, cooking, a sport, learning a new language, or volunteer work. If you shift your interest and attention to other activities for a while, eventually the cycle will swing again, and you can return to your work with renewed interest and enthusiasm.

Oscar Wilde once wrote, "In this world there are only two tragedies. One is not getting what one wants, and the other is getting it." He was trying to warn us that no matter how hard we work at being successful, success won't satisfy us. By the time we get there, having sacrificed so much on the altar of being successful, we will realize that success was not what we wanted. People who have money and power know something that you and I do not know and might not believe even when we are told. Money and power do not satisfy that unnameable hunger in the soul. Even the rich and powerful find themselves yearning for something more. We read about the family problems of the rich and famous, we see fictionalized conflicts on television, but we never get the message. Instead, we keep thinking that _____.

- ① if we had what they have, we would be happy
- ② the lives of the rich and powerful entirely depend on luck
- ③ though we have worked hard, we are not successful in life
- ④ money and power cannot replace valuable things in our life

Farmland provides more than just crops for human and animal consumption. It provides raw materials used to make building materials, paper, and fuels. The lives of many people also revolve around farming, which gives them the driving force that keeps them alive. Farmland, however, has slowly been eliminated by urban sprawl, in which people in urban areas spread into and take over rural areas. In the near future, urban sprawl is going to leave us with a shortage of natural resources. We need to be aware of the potential risks in future years and _____.

- ① move from urban areas to rural areas for living in farmland
- ② start to restrict urban sprawl and unnecessary development
- ③ limit farming in rural areas and development in urban areas
- ④ accelerate the development of natural resources in a short period

There's a company based in London, Great Britain, that offers a unique service: You can hire people to wait in line for you. Of course there's a fee. The "waiters" will queue up for anything from concert tickets, to passports, to a line for a driver's license. The company says it has done some research showing that people in Britain spent about a year of their entire lives waiting in lines. Some people just don't want to spend time doing that. How much does the waiting service cost? Twenty nine dollars an hour. The company so far has eighty employees, most of them recruited from the long-term unemployed because "It's a job that doesn't require a lot of skill or experience." The one thing it does require is _____.

- ① creativity

Britain, the biggest single beneficiary of the first age of globalization, was unlikely to gain much from its end. In the 1920s the old and tested policies no longer seemed to work. Paying for World War I had led to a tenfold increase in the national debt. Just paying the interest on that debt consumed close to half of total central government spending by the mid-1920s. The assumption that the budget should nevertheless be balanced meant that public finance was dominated by transfers from income tax-payers to bondholders. The increased power of the trade unions during and after the war not only intensified industrial strife but also meant that wage cuts were slower than price cuts. Rising real wages led to unemployment: during the Depression year of 1932 nearly three million people, close to a quarter of all insured workers, were out of work.

Professor Taylor, who wrote "What are Children for?," believes that the status of fatherhood has been affected by modern life. "Fathers have moved farther away from their children than ever before," he says. "In the past, sons looked to their father, emulating his job and wisdom. Now, however, fathers have nothing for their children to inherit. The world is changing too quickly, and instead of sitting at their father's feet listening to stories about the world, children are closed up in their own rooms on the Internet, finding out about it first. It is difficult to redefine the role of father. There is nothing obvious for him to do or be."

- ① Modern life has influenced the role and the position of fathers.
- ② In the past, sons imitated their fathers' job, depending on their fathers.
- ③ Now fathers serve as a sole source of providing information for their sons.
- ④ These days fathers are not certain of what role to assume for their sons.

Long before the century of Columbus, when the sailors looked out upon the seas, what they saw was a flat surface. Then came Columbus. As he watched sailing ships disappear over the horizon, he noticed that they didn't just disappear, but that the hull always disappeared first, then the sails, and the tip of the mast. Columbus saw the oceans differently. He came back from New World convinced that he had been to the other side of the sphere. He was only half right in distance, but 100 percent right in opening up new navigational possibilities. Columbus' accomplishment, once accepted, enabled mankind to use the existing skills of sea craft for vastly greater undertakings. In conclusion, man is limited not so much by his tools as by his vision.

The umbrella is so old that no one knows where it came from — it was invented before man learned how to write. But for thousands of years, the umbrella was used only for protection from the sun, rather than from the rain. The word 'umbrella', in fact, comes from the Latin word 'umbra', which means 'shade', and ancient slaves held umbrellas over their masters to give them shade. At the beginning, umbrellas were carried only by women, for they weren't considered 'manly' enough to be used by men. It wasn't until about 300 years ago that people began to use waterproof umbrellas in the rain.

Although less well known than other writings, the Icelandic sagas were some of the finest pieces of literature produced in Europe during the Middle Ages. The word saga is derived from the Old Norse verb meaning "to say" or "to tell." As written literature developed in Iceland, it fell into several categories. Some books were translations of other European works, including lives of the saints, ancient epics, and French romances. The major sagas that survived are those that tell of the lives of kings, legends of heroes, and stories of ordinary Icelanders. The royal sagas are mainly about Norway. These sagas reached their greatest literary height in the work of the Icelandic poet Snorri Sturluson.

- ① The word saga is closely related to an Old Norse verb.
- ② Sagas started and developed in an European country.
- ③ Sagas about kings and their families are mainly about Iceland.
- ④ Some Icelandic sagas were translations of other European works.

Year after year, a survey sponsored by Scotland's Centre for European Labour Market Research finds the same thing: If you want to be happy in life, be happy in your job. Okay, but what will make me happy in my job? Some researchers at the University of British Columbia in Canada have come up with an interesting way quantifying the seemingly unquantifiable.

- (A) For example, trust in management—by far the biggest component of job satisfaction—is worth as much in your overall happiness as a very substantial raise. Say you get a new boss and your trust in your workplace's management goes up a bit.
- (B) By analyzing life-satisfaction surveys that consider four key factors in job satisfaction, they have figured out how much each is worth when compared with salary increases.
- (C) Even that small increase in trust is like getting a thirty six percent pay raise, the researchers calculate. In other words, that will boost your level of overall satisfaction in life by about the same amount as a thirty six percent raise would.

Strategic thinking can make a positive impact on any area of life. The first step in strategic thinking is to _____ so that you can focus on it more effectively. That's what automotive innovator Henry Ford did when he created the assembly line, and that's why he said, "Nothing is particularly hard if you divide it into small jobs." He also said, "Only one person in a million can juggle the whole things at the same time and think strategically to create solid, valid plans." He is well known for his habit of splitting tasks. Right before the beginning of each weekday, he would think about daily issues, prioritizing the issues for the weekday. He made a rule to deal with the issues only allotted for the day.

You as the parent must try to read their crying to be able to help them. This will also help you assess your children's perception of your discipline. In many cases, when a child feels that he has been punished wrongly, it is more difficult to console him. He cried pathetically. Others may receive the punishment in a defiant mood. _____, when a child feels guilty and he is not punished or assured of forgiveness, he is likely to feel insecure and timid. In such a case when punished they may cry but quickly compose themselves and seek to attract love from the parent. Children usually want the crisp and clean punishment followed by fellowship rather than living with uncertainty.

The space shuttle *Challenger* had just taken off for its tenth flight in January 1986 when it exploded in the air and killed all seven people inside. Millions of people around the world were watching the liftoff because schoolteacher Christa McAuliffe was on board. McAuliffe, who had been chosen to be the first teacher in space, was planning to broadcast lessons directly to schools from the shuttle's orbit around Earth. This *Challenger* disaster led NASA to stop all space shuttle missions for nearly three years while they looked for the cause of the explosion and fixed the problem. They soon discovered that the shuttle had a faulty seal on one of the rocket boosters. Unfortunately, the teacher-in-space program was indefinitely put on hold. So were NASA's plans to send musicians, journalists, and artists to space.

② The reason why the American space program was put on hold
③ The importance of the space research and training of astronauts
④ A satire on the unsuccessful or tragic space missions

A team of researchers has found that immunizing patients with bee venom instead of with the bee's crushed bodies can better prevent serious and sometimes fatal sting reactions in the more than one million Americans who are hypersensitive to bee stings. The crushed-body treatment has been standard for fifty years, but a report released recently said that it was ineffective. The serum made from the crushed bodies of bees produced more adverse reactions than the injections of the venom did. The research compared results of the crushed-body treatment with results of immunotherapy that used insect venom and also with results of a placebo. After six to ten weeks of immunization, allergic reactions to stings occurred in seven of twelve patients treated with the placebo, seven of twelve treated with crushed-body extract, and one of eighteen treated with the venom.

- ① A new treatment for people allergic to bee stings
② A more effective method of preventing bee stings
③ The use of placebos in treating hypersensitive patients
④ Bee venom causing fatal reactions in hypersensitive patients

Look at the following list of numbers: 4, 8, 5, 3, 9, 7, 6. Read them out loud and memorize that sequence. If you speak English, you have about a 50 percent chance of remembering that perfectly. If you're Chinese, though, you're almost certain to get it right every time. This is because pronouncing them in Chinese takes shorter time. In addition, the number-naming systems are in Western and Asian languages. In English, for example, they say fourteen and sixteen, so one might expect that they would also say oneteen and twoteen. But they don't. The number system in English is irregular. In contrast, Asians have logical counting systems. Those differences mean that Asian children learn to count much faster and perform basic functions better than Western children.

It's long been part of folk wisdom that birth order strongly affects personality, intelligence and achievement. However, most of the research claiming that firstborns are radically different from other children has been discredited, and it now seems that any effects of birth order on intelligence or personality will likely be washed out by all the other influences in a person's life. In fact, the belief in the permanent impact of birth order, according to Toni Falbo, a social psychologist at the University of Texas at Austin, comes from the psychological theory that your personality is fixed by the time you're six. That assumption simply is incorrect. The better, later and larger studies are less likely to find birth order a useful predictor of anything. When two Swiss social scientists, Cecile Ernst and Jules Angst, reviewed 1,500 studies a few years ago they concluded that "birth order differences in personality are nonexistent in our sample. In particular, there is no evidence for a firstborn personality."

- ① A firstborn child is kind to other people.
- ② Birth order influences a person's intelligence.
- ③ An elder brother's personality is different from that of his younger brother.
- ④ Birth order has nothing to do with personality.

Late one night, Catherine Ryan Hyde was driving in Los Angeles. In a dangerous neighborhood, her car caught on fire. She got out. Three men ran toward her. She immediately felt afraid of them. They didn't hurt her, though. They put out the fire and called the fire department. When she turned to thank them, they were gone. Years later, that event became the subject of her novel called Pay It Forward. She never forgot that event. In the book, a teacher asks his students to "think of an idea for world change and put it into action." A boy named Trevor suggested doing kind acts for others. They used his ideas. Trevor's idea works like this. Someone chooses three people and does something nice for each one. In return, the recipients of that favor must do favors for three more people. For example, Greg Barton, the 1984, 1988, and 1992 U.S. Olympic medalist in kayaking, was born with a serious disability. (A) He had deformed feet, his toes pointed inward, and as a result, he could not walk easily. Even after a series of operations, he still had limited mobility. (B) Even so, Greg was never defeated. First, he taught himself to walk, and even to run. Then, he competed in his high school running team. (C) Happily, he discovered kayaking, a perfect sport for him because it required minimal leg and foot muscles. Using his upper body strength, he was able to master the sport. It's amazing what a little free beer can accomplish. Samso, then known for its dairy and pig farms, would become Denmark's showcase for sustainable power, eventually going carbon-free. How that would happen, however, was far from clear, since the government initially offered no funding, tax breaks or technical expertise.

- (A) So Hermansen showed up at every community or club meeting to give his pitch for going green. He pointed to the blustery island's untapped potential for wind power and the economic benefits of making Samso energy-independent. And he sometimes brought free beer.
(B) It worked. The islanders exchanged their oil-burning furnaces for centralized plants that burned leftover straw or wood chips to produce heat and hot water. They bought shares in new wind turbines, which generated the capital to build 11 large land-based turbines, enough to meet the entire island's electricity needs. Today Samso isn't just carbon-neutral—it actually produces 10% more clean electricity than it uses, with the extra power fed back into the grid at a profit.
(C) Given that almost all its power came from oil or coal—and the island's 4,300 residents didn't know a wind turbine from a grain silo—Samso seemed an odd choice. Soren Hermansen, though, saw an opportunity. The appeal was immediate, and when a renewable-energy project finally secured some funding, he volunteered to be the first—and only—staffer.

When the children had originally been shown what we think of as an object, like the copper tee, they pointed to an object of the same shape but a different substance, such as a plastic plumbing tee, not to the same substance with a different shape, namely a pile of copper bits. But when they had originally been shown what we think of as a substance, like the hair gel, they pointed to the same substance regardless of its shape, such as three smears of hair gel, and not to the same shape of a different substance, such as an identically curved glob of hand cream. So well before children know how the English language distinguishes individual objects from portions of a substance, they distinguish them on their own, and generalize words for them accordingly. Names for solids with a noteworthy shape are taken to apply to objects of that kind; names for nonsolids with an arbitrary shape are taken to apply to substances of that kind.

Of equal importance in wars of conquest were the germs that evolved in human societies with domestic animals. ① Infectious diseases like smallpox, measles, and flu arose as specialized germs of humans, derived by mutations of very similar ancestral germs that had infected animals. ② The most direct contribution of plant and animal domestication to wars of conquest was from Eurasia's horses, whose military role made them the jeeps and Sherman tanks of ancient warfare on that continent. ③ The humans who domesticated animals were the first to fall victim to the newly evolved germs, but those humans then evolved substantial resistance to the new disease. ④ When such partly immune people came into contact with others who had had no previous exposure to the germs, epidemics resulted in which up to 99 percent of the previously unexposed population was killed. Germs thus acquired ultimately from domestic animals played decisive roles in the European conquests of Native Americans, Australians, South Africans, and Pacific islanders.

Thunderstorms are extremely common in many parts of the world, for example, throughout most of North America. Updrafts of warm air set off these storms.

(B) An updraft may start over ground that is more intensely heated by the sun than the land surrounding the area. Bare, rocky, or paved areas, for example, usually have updrafts above them. The air in contact with the ground heats up and thus becomes lighter, more buoyant, than the air surrounding it.
(C) The draft may turn upward again and send the rain churning around in the cloud. Some of it may freeze to hail. Sooner or later, the water droplets grow heavy enough to resist the updrafts and fall to the ground, pulling air in the form of downdrafts with them.

America gets 97 % of its limes from Mexico, and a combination of bad weather and disease has sent that supply plummeting and prices skyrocketing. A 40-lb. (18kg) box of limes that cost the local restaurateurs about \$20 late last year now goes for \$120. In April, the average retail price for a lime hit 56 cents, more than double the price last year. Across the U.S., bars and restaurants are rationing their supply or, like Alaska Airlines, eliminating limes altogether. In Mexico, the value spike is attracting criminals, forcing growers to guard their limited supply of "green gold" from drug cartels. Business owners who depend on citrus are hoping that spring growth will soon bring costs back to normal.

Print, however, with its standard format and type, introduced exact mass reproduction.

Print transformed how knowledge itself was understood and transmitted. A manuscript is a unique and unreproducible object. (A) This meant that two readers separated by distance could discuss and compare identical books, right down to a specific word on a particular page. (B) With the introduction of consistent pagination, indexes, alphabetic ordering, and bibliographies (all unthinkable in manuscript), knowledge itself was slowly repackaged. (C) Textual scholarship became a cumulative science, as scholars could now gather manuscripts of, say, Aristotle's *Politics* and print a standard authoritative edition based on a comparison of all available copies. (D) This also led to the phenomenon of new and revised editions.

The WAIS-R is made up of eleven subtests, or scales. The subtests of the WAIS-R are arranged by the type of ability or skill being tested. The subtests are organized into two categories. Six subtests define the verbal scale, and five subtests constitute a performance scale. We can compute three scores: a verbal score, a performance score, and a total (or full-scale) score. The total score can be taken as an approximation of general intellectual ability. To administer the WAIS-R, you present each of the eleven subtests to your subject. The items within each subtest are arranged in order of difficulty. You start with relatively easy items, and then you progress to more difficult ones. You stop administering any one subtest when your subject fails a specified number of items in a row. You alternate between verbal and performance subtests. The whole process takes up to an hour and a half.

- ① The WAIS-R has eleven subtests, each of which has two main parts.
- ② Several subtests with higher scores among the eleven ones should be presented.
- ③ The items of each subtest in the WAIS-R begin from easy and continue on to more difficult ones.
- ④ Subjects take all of the verbal subtests first and then all of the performance subtests.

Language is saturated with implicit metaphors like "Events are objects and time is space." Indeed, space turns out to be a conceptual vehicle not just for time but for many kinds of states and circumstances. Just as a meeting can be moved from 3:00 to 4:00, a traffic light can go from green to red, a person can go from flipping burgers to running a corporation, and the economy can go from bad to worse. Metaphor is so widespread in language that it's hard to find expressions for abstract ideas that are not metaphorical. Does it imply that even our wispiest concepts are represented in the mind as hunks of matter that we move around on a mental stage? Does it say that rival claims about the world can never be true or false but can only be _____? Few things in life cannot be characterized in terms of variables and the causation of changes in them.

- ① proven to be always true in all circumstances
- ② irreversible and established truths that cannot be disputed
- ③ subject to scientific testings for their authenticity and clarity
- ④ alternative metaphors that frame a situation in different ways

The chimpanzee – who puts two sticks together in order to get at a banana because no one of the two is long enough to do the job – uses intelligence. So do we all when we go about our business, "figuring out" how to do things. *Intelligence*, in this sense, is taking things for granted as they are, making combinations which have the purpose of facilitating their manipulation; intelligence is thought in the service of biological survival. *Reason*, ㉠, aims at understanding; it tries to find out what is beneath the surface, to recognize the kernel, the essence of the reality which surrounds us. East of the Mississippi, the land rises slowly into the foothills of the Appalachian Mountains. At the edge of the Canadian plains, the Canadian Shield, a giant core of rock centered on the Hudson and James Bays, anchors the continent. The stony land of the Shield makes up the eastern half of Canada and the northeastern United States. In northern Quebec, the Canadian Shield descends to the Hudson Bay. The heavily eroded Appalachian Mountains are North America's oldest mountains and the continent's second-longest mountain range. They extend about 1,500 miles from Quebec to central Alabama. Coastal lowlands lie east and south of the Appalachians. Between the mountains and the coastal lowlands lies a wide area of rolling hills. Many rivers cut through the Piedmont and flow across to the Atlantic Coastal Plain in the Carolinas.

- ① Centered on the Hudson and James Bays is a giant core of rock, the Canadian Shield.
- ② The Appalachian Mountains are North America's longest mountain range.
- ③ From Quebec to central Alabama, the Appalachian Mountains stretch.
- ④ The Piedmont is traversed by many rivers that flow toward the Plain.

After analyzing a mass of data on job interview results, a research team discovered a surprising reality. Did the likelihood of being hired depend on qualifications? Or was it work experience? In fact, it was neither. It was just one important factor: did the candidate appear to be a pleasant person. Those candidates who had managed to ingratiate themselves were very likely to be offered a position; they had charmed their way to success. Some had made a special effort to smile and maintain eye contact. Others had praised the organization. This positivity had convinced the interviewers that such pleasant and socially skilled applicants would fit well into the workplace, and so should be offered a job.

Most writers lead double lives. They earn good money at legitimate professions, and carve out time for their writing as best they can: early in the morning, late at night, weekends, vacations. William Carlos Williams and Louis-Ferdinand Céline were doctors. Wallace Stevens worked for an insurance company. T.S. Elliot was a banker, then a publisher. Don DeLilo, Peter Carey, Salman Rushdie, and Elmore Leonard all worked for long stretches in advertising. Other writers teach. That is probably the most common solution today, and with every major university and college offering so-called creative writing courses, novelists and poets are continually scratching and scrambling to land themselves a spot. Who can blame them? The salaries might not be big, but the work is steady and the hours are good.

- ① Some writers struggle for teaching positions to teach creative writing courses.
② As a doctor, William Carlos Williams tried to find the time to write.
③ Teaching is a common way for writers to make a living today.
④ Salman Rushdie worked briefly in advertising with great triumph.

One of the largest celebrations of the passage of young girls into womanhood occurs in Latin American and Hispanic cultures. This event is called La Quinceañera, or the fifteenth year. ① It acknowledges that a young woman is now of marriageable age. The day usually begins with a Mass of Thanksgiving. ② By comparing the rites of passage of one culture with those of another, we can assess differences in class status. The young woman wears a full-length white or pastel-colored dress and is attended by fourteen friends and relatives who serve as maids of honor and male escorts. ③ Her parents and godparents surround her at the foot of the altar. When the Mass ends, other young relatives give small gifts to those who attended, while the Quinceañera herself places a bouquet of flowers on the altar of the Virgin. ④ Following the Mass is an elaborate party, with dancing, cake, and toasts. Finally, to end the evening, the young woman dances a waltz with her favorite escort.

(①) *Pinocchio* is a good example of how these elements can be emphasized rather than submerged beneath a surface realism. (②) Early in the film, the boy/puppet Pinocchio is told that in order to be a "real boy," he must show that he is "brave, truthful, and unselfish." (③) The three principal episodes of the movie represent ritualistic trials, testing the youth's moral fortitude. (④) As such, like most of Disney's works, the values in *Pinocchio* are traditional and conservative, an affirmation of the sanctity of the family unit, the importance of a Higher Power in guiding our destinies, and the need to play by society's rules.

A new study by Harvard researchers may provide a compelling reason to remove canned soup and juice from your dining table. People who ate one serving of canned food daily over the course of five days, the study found, had significantly elevated levels — more than a tenfold increase — of bisphenol-A, or BPA, a substance that lines most food and drink cans. Public health officials in the United States have come under increasing pressure to regulate it. Some of the research on BPA shows that it is linked to a higher risk of cancer, heart disease, and obesity. Some researchers, though, counter that its reputation as a health threat to people is exaggerated. The new study published in *The Journal of the American Medical Association* is the first to measure the amounts of BPA that are ingested when people eat food that comes directly out of a can.

A group of tribes and genera of hopping reptiles, small creatures of the dinosaur type, seem to have been pushed by competition and the pursuit of their enemies towards the alternatives of extinction or adaptation to colder conditions in the higher hills or by the sea. Among these distressed tribes there was developed a new type of scale — scales that were elongated into quill-like forms and that presently branched into the crude beginnings of feathers. These quill-like scales lay over one another and formed a heat-retaining covering more efficient than any reptilian covering that had hitherto existed. So they permitted an invasion of colder regions that were otherwise uninhabited. Perhaps simultaneously with these changes there arose in these creatures a greater solicitude for their eggs. Most reptiles are apparently quite careless about their eggs, which are left for sun and season to hatch. But some of the varieties upon this new branch of the tree of life were acquiring a habit of guarding their eggs and _____. With these adaptations to cold, other internal modifications were going on that made these creatures, the primitive birds, warm-blooded and independent of basking.

문 7. Why might people hovering near the poverty line be more likely to help their fellow humans? Part of it, Keltner thinks, is that poor people must often band together to make it through tough times—a process that probably makes them more socially astute. He says, "When you face uncertainty, it makes you orient to other people. You build up these strong social networks." When a poor young mother has a new baby, for instance, she may need help securing food, supplies, and childcare, and if she has healthy social times, members of her community will pitch in. But limited income is hardly a prerequisite for developing this kind of empathy and social responsiveness. Regardless of the size of our bank accounts, suffering becomes a conduit to altruism or heroism when our own pain compels us to be _____ other people's needs and to intervene when we see someone in the clutches of the kind of suffering we know so well.

문 8. The Soleil department store outlet in Shanghai would seem to have all the amenities necessary to succeed in modern Chinese retail: luxury brands and an exclusive location. Despite these advantages, however, the store's management thought it was still missing something to attract customers. Social media users are wondering, half-jokingly, whether the slide will kill anyone. But Soleil has a different concern that Chinese shopping malls will go away completely. Chinese shoppers, once seemingly in endless supply, are no longer turning up at brick-and-mortar outlets because of the growing online shopping, and they still go abroad to buy luxury goods. So, repurposing these massive spaces for consumers who have other ways to spend their time and money is likely to require a lot of creativity. _____

Taste buds got their name from the nineteenth-century German scientists Georg Meissner and Rudolf Wagner, who discovered mounds made up of taste cells that overlap like petals. Taste buds wear out every week to ten days, and we replace them, although not as frequently over the age of forty-five: our palates really do become jaded as we get older. It takes a more intense taste to produce the same level of sensation, and children have the keenest sense of taste. A baby's mouth has many more taste buds than an adult's, with some even dotting the cheeks. Children adore sweets partly because the tips of their tongues, more sensitive to sugar, haven't yet been blunted by trying to eat hot soup before it cools.

- ① Taste buds were invented in the nineteenth century.
- ② Replacement of taste buds does not slow down with age.

How on earth will it help the poor if governments try to strangle globalization by stemming the flow of trade, information, and capital—the three components of the global economy? That disparities between rich and poor are still too great is undeniable. But it is just not true that economic growth benefits only the rich and leaves out the poor, as the opponents of globalization and the market economy would have us believe. A recent World Bank study entitled "Growth Is Good for the Poor" reveals a one-for-one relationship between income of the bottom fifth of the population and per capita GDP. In other words, incomes of all sectors grow proportionately at the same rate. The study notes that openness to foreign trade benefits the poor to the same extent that it benefits the whole economy.

- ① Globalization deepens conflicts between rich and poor.
- ② The global economy grows at the expense of the poor.
- ③ Globalization can be beneficial regardless of one's economic status.
- ④ Governments must control the flow of trade to revive the economy.

The amount of information gathered by the eyes as contrasted with the ears has not been precisely calculated. Such a calculation not only involves a translation process, but scientists have been handicapped by lack of knowledge of what to count. A general notion, however, of the relative complexities of the two systems can be obtained by ____ (A) ____ the size of the nerves connecting the eyes and the ears to the centers of the brain. Since the optic nerve contains roughly eighteen times as many neurons as the cochlear nerve, we assume it transmits at least that much more information. Actually, in normally alert subjects, it is probable that the eyes may be as much as a thousand times as effective as the ears in ____ (B) ____ information.

Children's book awards have proliferated in recent years; today, there are well over 100 different awards and prizes by a variety of organizations. ① The awards may be given for books of a specific genre or simply for the best of all children's books published within a given time period. An award may honor a particular book or an author for a lifetime contribution to the world of children's literature. ② Most children's book awards are chosen by adults, but now a growing number of children's choice book awards exist. The larger national awards given in most countries are the most influential and have helped considerably to raise public awareness about the fine books being published for young readers. ③ An award ceremony for outstanding services to the publishing industry is put on hold. ④ Of course, readers are wise not to put too much faith in award-winning books. An award doesn't necessarily mean a good reading experience, but it does provide a starting place when choosing books.

This inequality is corrected by their getting in their turn better portions from kills by other people.

Let us examine a situation of simple distribution such as occurs when an animal is killed in a hunt. One might expect to find the animal portioned out according to the amount of work done by each hunter to obtain it. (①) To some extent this principle is followed, but other people have their rights as well. (②) Each person in the camp gets a share depending upon his or her relation to the hunters. (③) When a kangaroo is killed, for example, the hunters have to give its main parts to their kinfolk and the worst parts may even be kept by the hunters themselves. (④) The net result in the long run is substantially the same to each person, but through this system the principles of kinship obligation and the morality of sharing food have been emphasized.

The most innovative of the group therapy approaches was psychodrama, the brainchild of Jacob L. Moreno. Psychodrama as a form of group therapy started with premises that were quite alien to the Freudian worldview that mental illness essentially occurs within the psyche or mind.

- (A) But he also believed that creativity is rarely a solitary process but something brought out by social interactions. He relied heavily on theatrical techniques, including role-playing and improvisation, as a means to promote creativity and general social trust.
- (B) Despite his theoretical difference from the mainstream viewpoint, Moreno's influence in shaping psychological consciousness in the twentieth century was considerable. He believed that the nature of human beings is to be creative and that living a creative life is the key to human health and well-being.
- (C) His most important theatrical tool was what he called role reversal — asking participants to take on another's persona. The act of pretending "as if" one were in another's skin was designed to help bring out the empathic impulse and to develop it to higher levels of expression.

Only New Zealand, New Caledonia and a few small islands peek above the waves.

Lurking beneath New Zealand is a long-hidden continent called Zealandia, geologists say. But since nobody is in charge of officially designating a new continent, individual scientists will ultimately have to judge for themselves. (①) A team of geologists pitches the scientific case for the new continent, arguing that Zealandia is a continuous expanse of continental crust covering around 4.9 million square kilometers. (②) That's about the size of the Indian subcontinent. Unlike the other mostly dry continents, around 94 percent of Zealandia hides beneath the ocean. (③) Except those tiny areas, all parts of Zealandia submerge under the ocean. "If we could pull the plug on the world's oceans, it would be quite clear that Zealandia stands out about 3,000 meters above the surrounding ocean crust," says a geologist. (④) "If it wasn't for the ocean level, long ago we'd have recognized Zealandia for what it was—a continent."

The first decades of the 17th century witnessed an exponential growth in the understanding of the Earth and heavens, a process usually referred to as the Scientific Revolution. The older reliance on the philosophy of Aristotle was fast waning in universities. In the Aristotelian system of natural philosophy, the movements of bodies were explained 'causally' in terms of the amount of the four elements (earth, water, air, fire) that they possessed, and objects moved up or down to their 'natural' place depending on the preponderance of given elements of which they were composed. Natural philosophy was routinely contrasted with 'mixed mathematical' subjects such as optics, hydrostatics, and harmonics, where numbers could be applied to measurable external quantities such as length or duration.

- ① There was an increase in the knowledge of the Earth and heavens in the early 17th century.
- ② Dependence on the philosophy of Aristotle was on the decline in universities in the 17th century.
- ③ Natural philosophy proposed four elements to explain the movements of bodies.
- ④ In natural philosophy, numbers were routinely put to use for measurable external quantities.

Stressful events early in a person's life, such as neglect or abuse, can have psychological impacts into adulthood. New research shows that these effects may persist in their children and even their grandchildren. Larry James and Lorena Schmidt, biochemists at the Tufts School of Medicine, caused chronic social stress in adolescent mice by regularly relocating them to new cages over the course of seven weeks. The researchers then tested these stressed mice in adulthood using a series of standard laboratory measures for rodent anxiety, such as how long the mice spent in open areas of a maze and how frequently they approached mice they had never met before. Female mice showed more anxious behaviors compared with control animals, whereas the males did not. Both sexes' offspring displayed more anxious behaviors, however, and the males who had been stressed as adolescents even transmitted these behavior patterns to their female grandchildren and great-grandchildren.

- ① Your grandfather's stress when he was an adolescent might make you more anxious.
- ② Early stressful experiences alleviate anxiety later in life.
- ③ Constant moving from one place to another can benefit offspring.
- ④ Chronic social stress cannot be caused by relocation.

Over the last years of traveling, I've observed how much we humans live in the past. The past is around us constantly, considering that, the minute something is manifested, it is the past. Our surroundings, our homes, our environments, our architecture, our products are all past constructs. We should live with what is part of our time, part of our collective consciousness, those things that were produced during our lives. Of course, we do not have the choice or control to have everything around us relevant or conceived during our time, but what we do have control of should be a reflection of the time in which we exist and communicate the present. Sharks are covered in scales made from the same material as teeth. These flexible scales protect the shark and help it swim quickly in water. A shark can move the scales as it swims. This movement helps reduce the water's drag. Amy Lang, an aerospace engineer at the University of Alabama, studies the scales on the shortfin mako, a relative of the great white shark. Lang and her team discovered that the mako shark's scales differ in size and in flexibility in different parts of its body. For instance, the scales on the sides of the body are tapered—wide at one end and narrow at the other end. Because they are tapered, these scales move very easily. They can turn up or flatten to adjust to the flow of water around the shark and to reduce drag. Lang feels that shark scales can inspire designs for machines that experience drag, such as airplanes.

- ① A shark has scales that always remain immobile to protect itself as it swims.
- ② Lang revealed that the scales of a mako shark are utilized to lessen drag in water.

Students at Macaulay Honors College (MHC) don't stress about the high price of tuition. That's because theirs is free. At Macaulay and a handful of other service academies, work colleges, single-subject schools and conservatories, 100 percent of the student body receive a full tuition scholarship for all four years. Macaulay students also receive a laptop and \$7,500 in "opportunities funds" to pursue research, service experiences, study abroad programs and internships. "The most important thing is not the free tuition, but the freedom of studying without the burden of debt on your back," says Ann Kirschner, university dean of Macaulay Honors College. The debt burden, she says, "really compromises decisions students make in college, and we are giving them the opportunity to be free of that." Schools that grant free tuition to all students are rare, but a greater number of institutions provide scholarships to enrollees with high grades. Institutions such as Indiana University Bloomington offer automatic awards to high-performing students with stellar GPAs and class ranks.

Insomnia can be classified as transient, acute, or chronic. Transient insomnia lasts for less than a week. It can be caused by another disorder, by changes in the sleep environment, by the timing of sleep, severe depression, or by stress. Its consequences such as sleepiness and impaired psychomotor performance are similar to those of sleep deprivation. Acute insomnia is the inability to consistently sleep well for a period of less than a month. Acute insomnia is present when there is difficulty initiating or maintaining sleep or when the sleep that is obtained is not refreshing. These problems occur despite adequate opportunity and circumstances for sleep and they can impair daytime functioning. Acute insomnia is also known as short term insomnia or stress related insomnia. Chronic insomnia lasts for longer than a month. It can be caused by another disorder, or it can be a primary disorder. People with high levels of stress hormones or shifts in the levels of cytokines are more likely than others to have chronic insomnia. Its effects can vary according to its causes. They might include muscular weariness, hallucinations, and/or mental fatigue. Chronic insomnia can also cause double vision.

Domesticated animals are the earliest and most effective 'machines' ① available to humans. They take the strain off the human back and arms. ② Utilizing with other techniques, animals can raise human living standards very considerably, both as supplementary foodstuffs (protein in meat and milk) and as machines ③ to carry burdens, lift water, and grind grain. Since they are so obviously ④ of great benefit, we might expect to find that over the centuries humans would increase the number and quality of the animals they kept. Surprisingly, this has not usually been the case.

A myth is a narrative that embodies—and in some cases ① helps to explain—the religious, philosophical, moral, and political values of a culture. Through tales of gods and supernatural beings, myths ② try to make sense of occurrences in the natural world. Contrary to popular usage, myth does not mean "falsehood." In the broadest sense, myths are stories—usually whole groups of stories—③ that can be true or partly true as well as false; regardless of their degree of accuracy, however, myths frequently express the deepest beliefs of a culture. According to this definition, the *Iliad* and the *Odyssey*, the Koran, and the Old and New Testaments can all ④ refer to as myths.

Mapping technologies are being used in many new applications. Biological researchers are exploring the molecular structure of DNA ("mapping the genome"), geophysicists are mapping the structure of the Earth's core, and oceanographers are mapping the ocean floor. Computer games have various imaginary "lands" or levels where rules, hazards, and rewards change. Computerization now challenges reality with "virtual reality," artificial environments that stimulate special situations, which may be useful in training and entertainment. Mapping techniques are being used also in the realm of ideas. For example, relationships between ideas can be shown using what are called concept maps. Starting from a general or "central" idea, related ideas can be connected, building a web around the main concept. This is not a map by any traditional definition, but the tools and techniques of cartography are employed to produce it, and in some ways it resembles a map.

When giving performance feedback, you should consider the recipient's past performance and your estimate of his or her future potential in designing its frequency, amount, and content. For high performers with potential for growth, feedback should be frequent enough to prod them into taking corrective action, but not so frequent that it is experienced as controlling and saps their initiative. For adequate performers who have settled into their jobs and have limited potential for advancement, very little feedback is needed because they have displayed reliable and steady behavior in the past, knowing their tasks and realizing what needs to be done. For poor performers—that is, people who will need to be removed from their jobs if their performance doesn't improve—feedback should be frequent and very specific, and the connection between acting on the feedback and negative sanctions such as being laid off or fired should be made explicit.

- ① Time your feedback well.
- ② Customize negative feedback.
- ③ Tailor feedback to the person.
- ④ Avoid goal-oriented feedback.

Langston Hughes was born in Joplin, Missouri, and graduated from Lincoln University, in which many African-American students have pursued their academic disciplines. At the age of eighteen, Hughes published one of his most well-known poems, "Negro Speaks of Rivers." Creative and experimental, Hughes incorporated authentic dialect in his work, adapted traditional poetic forms to embrace the cadences and moods of blues and jazz, and created characters and themes that reflected elements of lower-class black culture. With his ability to fuse serious content with humorous style, Hughes attacked racial prejudice in a way that was natural and witty.

In 2007, our biggest concern was "too big to fail." Wall Street banks had grown to such staggering sizes, and had become so central to the health of the financial system, that no rational government could ever let them fail. ① Aware of their protected status, banks made excessively risky bets on housing markets and invented ever more complicated derivatives. ② New virtual currencies such as bitcoin and ethereum have radically changed our understanding of how money can and should work. ③ The result was the worst financial crisis since the breakdown of our economy in 1929. ④ In the years since 2007, we have made great progress in addressing the too-big-to-fail dilemma. Our banks are better capitalized than ever. Our regulators conduct regular stress tests of large institutions.

Imagine that two people are starting work at a law firm on the same day. One person has a very simple name. The other person has a very complex name. We've got pretty good evidence that over the course of their next 16 plus years of their career, the person with the simpler name will rise up the legal hierarchy more quickly. They will attain partnership more quickly in the middle parts of their career. And by about the eighth or ninth year after graduating from law school the people with simpler names are about seven to ten percent more likely to be partners—which is a striking effect. We try to eliminate all sorts of other alternative explanations. For example, we try to show that it's not about foreignness because foreign names tend to be harder to pronounce. But even if you look at just white males with Anglo-American names—so really the true in-group, you find that among those white males with Anglo names they are more likely to rise up if their names happen to be simpler. So simplicity is one key feature in names that determines various outcomes.

- ① the development of legal names
- ② the concept of attractive names
- ③ the benefit of simple names
- ④ the roots of foreign names

Fundamentally, they see themselves as smarter than their opposite numbers in competitive companies—and, quite often, they are. They do not expect, (A), to be buying a well-tested product with an extensive list of industry references. Why bother with the history of everything? _____. In literature classes you don't learn about genes; in physics classes you don't learn about human evolution. So you get a partial view of the world. That makes it hard to find *meaning* in education. The French sociologist Emile Durkheim called this sense of disorientation and meaninglessness *anomie*, and he argued that it could lead to despair and even suicide. The German sociologist Max Weber talked of the "disenchantment" of the world. In the past, people had a unified vision of their world, a vision usually provided by the origin stories of their own religious traditions. That unified vision gave a sense of purpose, of meaning, even of enchantment to the world and to life. Today, though, many writers have argued that a sense of meaninglessness is inevitable in a world of science and rationality. Modernity, it seems, means meaninglessness.

- ① In the past, the study of history required disenchantment from science
- ② Recently, science has given us lots of clever tricks and meanings
- ③ Today, we teach and learn about our world in fragments

The earliest government food service programs began around 1900 in Europe. Programs in the United States date from the Great Depression, when the need to use surplus agricultural commodities was joined to concern for feeding the children of poor families. During and after World War II, the explosion in the number of working women fueled the need for a broader program. What was once a function of the family — providing lunch — was shifted to the school food service system. The National School Lunch Program is the result of these efforts. The program is designed to provide federally assisted meals to children of school age. From the end of World War II to the early 1980s, funding for school food service expanded steadily. Today it helps to feed children in almost 100,000 schools across the United States. Its first function is to provide a nutritious lunch to all students; the second is to provide nutritious food at both breakfast and lunch to underprivileged children. If anything, the role of school food service as a replacement for what was once a family function has been expanded.

- ① The increase in the number of working women boosted the expansion of food service programs.
- ② The US government began to feed poor children during the Great Depression despite the food shortage.
- ③ The US school food service system presently helps to feed children of poor families.
- ④ The function of providing lunch has been shifted from the family to schools.

Listening to somebody else's ideas is the one way to know whether the story you believe about the world—as well as about yourself and your place in it—remains intact. We all need to examine our beliefs, air them out and let them breathe. Hearing what other people have to say, especially about concepts we regard as foundational, is like opening a window in our minds and in our hearts. Speaking up is important. Yet to speak up without listening is like banging pots and pans together: even if it gets you attention, it's not going to get you respect. There are three prerequisites for conversation to be meaningful: 1. You have to know what you're talking about, meaning that you have an original point and are not echoing a worn-out, hand-me-down or pre-fab argument; 2. You respect the people with whom you're speaking and are authentically willing to treat them courteously even if you disagree with their positions; 3. You have to be both smart and informed enough to listen to what the opposition says while handling your own perspective on the topic with uninterrupted good humor and discernment.

② We need to listen and speak up in order to communicate well.
③ We are reluctant to change our beliefs about the world we see.
④ We hear only what we choose and attempt to ignore different opinions.

The future may be uncertain, but some things are undeniable: climate change, shifting demographics, geopolitics. The only guarantee is that there will be changes, both wonderful and terrible. It's worth considering how artists will respond to these changes, as well as what purpose art serves, now and in the future. Reports suggest that by 2040 the impacts of human-caused climate change will be inescapable, making it the big issue at the centre of art and life in 20 years' time. Artists in the future will wrestle with the possibilities of the post-human and post-Anthropocene—artificial intelligence, human colonies in outer space and potential doom. The identity politics seen in art around the #MeToo and Black Lives Matter movements will grow as environmentalism, border politics and migration come even more sharply into focus. Art will become increasingly diverse and might not 'look like art' as we expect. In the future, once we've become weary of our lives being visible online for all to see and our privacy has been all but lost, anonymity may be more desirable than fame. Instead of thousands, or millions, of likes and followers, we will be starved for authenticity and connection. Art could, in turn, become more collective and experiential, rather than individual.

② How will global warming affect our lives?
③ How will artificial intelligence influence the environment?
④ What changes will be made because of political movements?

The Second Amendment of the U.S. Constitution states: "A well-regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed." Supreme Court rulings, citing this amendment, have upheld the right of states to regulate firearms. However, in a 2008 decision confirming an individual right to keep and bear arms, the court struck down Washington, D.C. laws that banned handguns and required those in the home to be locked or disassembled. A number of gun advocates consider ownership a birthright and an essential part of the nation's heritage. The United States, with less than 5 percent of the world's population, has about 35 ~ 50 percent of the world's civilian-owned guns, according to a 2007 report by the Switzerland-based Small Arms Survey. It ranks number one in firearms per capita. The United States also has the highest homicide-by-firearm rate among the world's most developed nations. But many gun-rights proponents say these statistics do not indicate a cause-and-effect relationship and note that the rates of gun homicide and other gun crimes in the United States have dropped since highs in the early 1990's.

Advocates of homeschooling believe that children learn better when they are in a secure, loving environment. Many psychologists see the home as the most natural learning environment, and originally the home was the classroom, long before schools were established. Parents who homeschool argue that they can monitor their children's education and give them the attention that is lacking in a traditional school setting. Students can also pick and choose what to study and when to study, thus enabling them to learn at their own pace. (A), critics of homeschooling say that children who are not in the classroom miss out on learning important social skills because they have little interaction with their peers. Several studies, though, have shown that the home-educated children appear to do just as well in terms of social and emotional development as other students, having spent more time in the comfort and security of their home, with guidance from parents who care about their welfare. When the brain perceives a threat in the immediate surroundings, it initiates a complex string of events in the body. It sends electrical messages to various glands, organs that release chemical hormones into the bloodstream. Blood quickly carries these hormones to other organs that are then prompted to do various things. ① The adrenal glands above the kidneys, for example, pump out adrenaline, the body's stress hormone. ② Adrenaline travels all over the body doing things such as widening the eyes to be on the lookout for signs of danger, pumping the heart faster to keep blood and extra hormones flowing, and tensing the skeletal muscles so they are ready to lash out at or run from the threat. ③ The whole process is called the fight-or-flight response, because it prepares the body to either battle or run for its life. ④ Humans consciously control their glands to regulate the release of various hormones. When an organism is alive, it takes in carbon dioxide from the air around it. Most of that carbon dioxide is made of carbon-12, but a tiny portion consists of carbon-14. So the living organism always contains a very small amount of radioactive carbon, carbon-14. A detector next to the living organism would record radiation given off by the carbon-14 in the organism. When the organism dies, it no longer takes in carbon dioxide. No new carbon-14 is added, and the old carbon-14 slowly decays into nitrogen. The amount of carbon-14 slowly (A) as time goes on. Over time, less and less radiation from carbon-14 is produced. The amount of carbon-14 radiation detected for an organism is a measure, therefore, of how long the organism has been (B). From only a few very simple organisms, a great number of complex, multicellular forms evolved over this immense period. The origin of new species, which the nineteenth-century English naturalist Charles Darwin once referred to as "the mystery of mysteries," is the natural process of speciation responsible for generating this remarkable _____ with whom humans share the planet. Although taxonomists presently recognize some 1.5 million living species, the actual number is possibly closer to 10 million. Warming temperatures and loss of oxygen in the sea will shrink hundreds of fish species—from tunas and groupers to salmon, thresher sharks, haddock and cod—even more than previously thought, a new study concludes. Because warmer seas speed up their metabolisms, fish, squid and other water-breathing creatures will need to draw more oxygen from the ocean. At the same time, warming seas are already reducing the availability of oxygen in many parts of the sea. A pair of University of British Columbia scientists argue that since the bodies of fish grow faster than their gills, these animals eventually will reach a point where they can't get enough oxygen to sustain normal growth. "What we found was that the body size of fish decreases by 20 to 30 percent for every 1 degree Celsius increase in water temperature," says author William Cheung.

While libraries and archives may appear the same, the differences are important. (①) An archive collection is almost always made up of primary sources, while a library contains secondary sources. (②) To learn more about the Korean War, you'd go to a library for a history book. If you wanted to read the government papers, or letters written by Korean War soldiers, you'd go to an archive. (③) If you're searching for information, chances are there's an archive out there for you. Many state and local archives store public records—which are an amazing, diverse resource. (④) An online search of your state's archives will quickly show you they contain much more than just the minutes of the legislature—there are detailed land grant information to be found, old town maps, criminal records and oddities such as peddler license applications.

The term burnout refers to a “wearing out” from the pressures of work. Burnout is a chronic condition that results as daily work stressors take their toll on employees. ① The most widely adopted conceptualization of burnout has been developed by Maslach and her colleagues in their studies of human service workers. Maslach sees burnout as consisting of three interrelated dimensions. The first dimension—emotional exhaustion—is really the core of the burnout phenomenon. ② Workers suffer from emotional exhaustion when they feel fatigued, frustrated, used up, or unable to face another day on the job. The second dimension of burnout is a lack of personal accomplishment. ③ This aspect of the burnout phenomenon refers to workers who see themselves as failures, incapable of effectively accomplishing job requirements. ④ Emotional labor workers enter their occupation highly motivated although they are physically exhausted. The third dimension of burnout is depersonalization. This dimension is relevant only to workers who must communicate interpersonally with others (e.g. clients, patients, students) as part of the job.

Deserts cover more than one-fifth of the Earth's land area, and they are found on every continent. A place that receives less than 25 centimeters (10 inches) of rain per year is considered a desert. Deserts are part of a wider class of regions called drylands. These areas exist under a “moisture deficit,” which means they can frequently lose more moisture through evaporation than they receive from annual precipitation. Despite the common conceptions of deserts as hot, there are cold deserts as well. The largest hot desert in the world, northern Africa's Sahara, reaches temperatures of up to 50 degrees Celsius (122 degrees Fahrenheit) during the day. But some deserts are always cold, like the Gobi Desert in Asia and the polar deserts of the Antarctic and Arctic, which are the world's largest. Others are mountainous. Only about 20 percent of deserts are covered by sand. The driest deserts, such as Chile's Atacama Desert, have parts that receive less than two millimeters (0.08 inches) of precipitation a year. Such environments are so harsh and otherworldly that scientists have even studied them for clues about life on Mars. On the other hand, every few years, an unusually rainy period can produce “super blooms,” where even the Atacama becomes blanketed in wildflowers.

- ① There is at least one desert on each continent.
- ② The Sahara is the world's largest hot desert.
- ③ The Gobi Desert is categorized as a cold desert.
- ④ The Atacama Desert is one of the rainiest deserts.

Social media, magazines and shop windows bombard people daily with things to buy, and British consumers are buying more clothes and shoes than ever before. Online shopping means it is easy for customers to buy without thinking, while major brands offer such cheap clothes that they can be treated like disposable items—worn two or three times and then thrown away. In Britain, the average person spends more than £ 1,000 on new clothes a year, which is around four percent of their income. That might not sound like much, but that figure hides two far more worrying trends for society and for the environment. First, a lot of that consumer spending is via credit cards. British people currently owe approximately £ 670 per adult to credit card companies. That's 66 percent of the average wardrobe budget. Also, not only are people spending money they don't have, they're using it to buy things _____. Britain throws away 300,000 tons of clothing a year, most of which goes into landfill sites.

- ① they don't need

Excellence is the absolute prerequisite in fine dining because the prices charged are necessarily high. An operator may do everything possible to make the restaurant efficient, but the guests still expect careful, personal service: food prepared to order by highly skilled chefs and delivered by expert servers. Because this service is, quite literally, manual labor, only marginal improvements in productivity are possible. For example, a cook, server, or bartender can move only so much faster before she or he reaches the limits of human performance. Thus, only moderate savings are possible through improved efficiency, which makes an escalation of prices _____. (It is an axiom of economics that as prices rise, consumers become more discriminating.) Thus, the clientele of the fine-dining restaurant expects, demands, and is willing to pay for excellence.

During the late twentieth century socialism was on the retreat both in the West and in large areas of the developing world. During this new phase in the evolution of market capitalism, global trading patterns became increasingly interlinked, and advances in information technology meant that deregulated financial markets could shift massive flows of capital across national boundaries within seconds. 'Globalization' boosted trade, encouraged productivity gains and lowered prices, but critics alleged that it exploited the low-paid, was indifferent to environmental concerns and subjected the Third World to a monopolistic form of capitalism. Many radicals within Western societies who wished to protest against this process joined voluntary bodies, charities and other non-governmental organizations, rather than the marginalized political parties of the left. The environmental movement itself grew out of the recognition that the world was interconnected, and an angry, if diffuse, international coalition of interests emerged.

In the blazing midday sun, the yellow egg-shaped rock stood out from a pile of recently unearthed gravel. Out of curiosity, sixteen-year-old miner Komba Johnbull picked it up and fingered its flat, pyramidal planes. Johnbull had never seen a diamond before, but he knew enough to understand that even a big find would be no larger than his thumbnail. Still, the rock was unusual enough to merit a second opinion. Sheepishly, he brought it over to one of the more experienced miners working the muddy gash deep in the jungle. The pit boss's eyes widened when he saw the stone. "Put it in your pocket," he whispered. "Keep digging." The older miner warned that it could be dangerous if anyone thought they had found something big. So Johnbull kept shoveling gravel until nightfall, pausing occasionally to grip the heavy stone in his fist. Could it be?

Lasers are possible because of the way light interacts with electrons. Electrons exist at specific energy levels or states characteristic of that particular atom or molecule. The energy levels can be imagined as rings or orbits around a nucleus. Electrons in outer rings are at higher energy levels than those in inner rings. Electrons can be bumped up to higher energy levels by the injection of energy—for example, by a flash of light. When an electron drops from an outer to an inner level, “excess” energy is given off as light. The wavelength or color of the emitted light is precisely related to the amount of energy released. Depending on the particular lasing material being used, specific wavelengths of light are absorbed (to energize or excite the electrons) and specific wavelengths are emitted (when the electrons fall back to their initial level).

Scientists have long known that higher air temperatures are contributing to the surface melting on Greenland's ice sheet. But a new study has found another threat that has begun attacking the ice from below: Warm ocean water moving underneath the vast glaciers is causing them to melt even more quickly. The findings were published in the journal Nature Geoscience by researchers who studied one of the many “ice tongues” of the Nioghalvfjærdsfjorden Glacier in northeast Greenland. An ice tongue is a strip of ice that floats on the water without breaking off from the ice on land. The massive one these scientists studied is nearly 50 miles long. The survey revealed an underwater current more than a mile wide where warm water from the Atlantic Ocean is able to flow directly towards the glacier, bringing large amounts of heat into contact with the ice and _____ the glacier's melting.

A psychologist presented realistic animated scenes of fish and other underwater objects to Japanese and American students and asked them to report what they had seen. Americans and Japanese made about an equal number of references to the focal fish, but the Japanese made more than 60 percent more references to background elements, including the water, rocks, bubbles, and inert plants and animals. In addition, whereas Japanese and American participants made about equal numbers of references to movement involving active animals, the Japanese participants made almost twice as many references to relationships involving inert, background objects. Thus, blood, and life-giving oxygen, are easier for the heart to circulate to the brain.

People can be exposed to gravitational force, or g-force, in different ways. It can be localized, affecting only a portion of the body, as in getting slapped on the back. It can also be momentary, such as hard forces endured in a car crash. A third type of g-force is sustained, or lasting for at least several seconds. (①) Sustained, body-wide g-forces are the most dangerous to people. (②) The body usually withstands localized or momentary g-force better than sustained g-force, which can be deadly because blood is forced into the legs, depriving the rest of the body of oxygen. (③) Sustained g-force applied while the body is horizontal, or lying down, instead of sitting or standing tends to be more tolerable to people, because blood pools in the back and not the legs. (④) Some people, such as astronauts and fighter jet pilots, undergo special training exercises to increase their bodies' resistance to g-force.

If you ask for only one thing initially, she may assume that getting it will make you ready to accept the offer (or at least to make a decision). If you keep saying "and one more thing..." she is unlikely to remain in a generous or understanding mood. Furthermore, if you have more than one request, don't simply mention all the things you want—A, B, C, and D; also signal the relative importance of each to you. - (B) Lamarck thought that these characteristics would be passed on to the offspring. Lamarck called this idea *inheritance of acquired characteristics*.
- (C) For example, Lamarck might explain that a kangaroo's powerful hind legs were the result of ancestors strengthening their legs by jumping and then passing that acquired leg strength on to the offspring. Around 1700 there were, by some accounts, more than 2,000 London coffeehouses, occupying more premises and paying more rent than any other trade. Each coffeehouse specialized in a different type of clientele. In one, physicians could be consulted. The feeling of being loved and the biological response it stimulates is triggered by nonverbal cues: the tone in a voice, the expression on a face, or the touch that feels just right. Nonverbal cues — rather than spoken words — make us feel that the person we are with is interested in, understands, and values us. When we're with them, we feel safe. We even see the power of nonverbal cues in the wild. After evading the chase of predators, animals often nuzzle each other as a means of stress relief. This bodily contact provides reassurance of safety and relieves stress.

There are times, like holidays and birthdays, when toys and gifts accumulate in a child's life. You can use these times to teach a healthy nondependency on things. Don't surround your child with toys. Instead, arrange them in baskets, have one basket out at a time, and rotate baskets occasionally. If a cherished object is put away for a time, bringing it out creates a delightful remembering and freshness of outlook. Suppose your child asks for a toy that has been put away for a while. You can direct attention toward an object or experience that is already in the environment. If you lose or break a possession, try to model a good attitude ("I appreciated it while I had it!") so that your child can begin to develop an attitude of nonattachment. If a toy of hers is broken or lost, help her to say, "I had fun with that."

- ① building a healthy attitude toward possessions
 ② learning the value of sharing toys with others
 ③ teaching how to arrange toys in an orderly manner
 ④ accepting responsibility for behaving in undesirable ways

Many parents have been misguided by the "self-esteem movement," which has told them that the way to build their children's self-esteem is to tell them how good they are at things. Unfortunately, trying to convince your children of their competence will likely fail because life has a way of telling them unequivocally how capable or incapable they really are through success and failure. Research has shown that how you praise your children has a powerful influence on their development. Some researchers found that children who were praised for their intelligence, as compared to their effort, became overly focused on results. Following a failure, these same children persisted less, showed less enjoyment, attributed their failure to a lack of ability, and performed poorly in future achievement efforts. Praising children for intelligence made them fear difficulty because they began to equate failure with stupidity.

- ① Frequent praises increase self-esteem of children.
 ② Compliments on intelligence bring about negative effect.
 ③ A child should overcome fear of failure through success.
 ④ Parents should focus on the outcome rather than the process.

In recent years, the increased popularity of online marketing and social media sharing has boosted the need for advertising standardization for global brands. Most big marketing and advertising campaigns include a large online presence. Connected consumers can now zip easily across borders via the internet and social media, making it difficult for advertisers to roll out adapted campaigns in a controlled, orderly fashion. As a result, most global consumer brands coordinate their digital sites internationally. For example, Coca-Cola web and social media sites around the world, from Australia and Argentina to France, Romania, and Russia, are surprisingly _____. All feature splashes of familiar Coke red, iconic Coke bottle shapes, and Coca-Cola's music and "Taste the Feeling" themes.

In our monthly surveys of 5,000 American workers and 500 U.S. employers, a huge shift to hybrid work is abundantly clear for office and knowledge workers. ① An emerging norm is three days a week in the office and two at home, cutting days on site by 30 % or more. You might think this cutback would bring a huge drop in the demand for office space. ② But our survey data suggests cuts in office space of 1 % to 2 % on average, implying big reductions in density not space. We can understand why. High density at the office is uncomfortable and many workers dislike crowds around their desks. ③ Most employees want to work from home on Mondays and Fridays. Discomfort with density extends to lobbies, kitchens, and especially elevators. ④ The only sure-fire way to reduce density is to cut days on site without cutting square footage as much. Discomfort with density is here to stay according to our survey evidence.

Immigration reform is a political minefield. (①) About the only aspect of immigration policy that commands broad political support is the resolve to secure the U.S. border with Mexico to limit the flow of illegal immigrants. (②) Texas sheriffs recently developed a novel use of the Internet to help them keep watch on the border. (③) Citizens who want to help monitor the border can go online and serve as “virtual Texas deputies.” (④) If they see anyone trying to cross the border, they send a report to the sheriff’s office, which follows up, sometimes with the help of the U.S. Border Patrol.

Over the last fifty years, all major subdisciplines in psychology have become more and more isolated from each other as training becomes increasingly specialized and narrow in focus. As some psychologists have long argued, if the field of psychology is to mature and advance scientifically, its disparate parts (for example, neuroscience, developmental, cognitive, personality, and social) must become whole and integrated again. Science advances when distinct topics become theoretically and empirically integrated under simplifying theoretical frameworks. Psychology of science will encourage collaboration among psychologists from various sub-areas, helping the field achieve coherence rather than continued fragmentation. In this way, psychology of science might act as a template for psychology as a whole by integrating under one discipline all of the major fractions/factions within the field. It would be no small feat and of no small import if the psychology of science could become a model for the parent discipline on how to combine resources and study science _____.

The tragedies of the Greek dramatist Sophocles have come to be regarded as the high point of classical Greek drama. Sadly, only seven of the 123 tragedies he wrote have survived, but of these perhaps the finest is *Oedipus the King*. The play was one of three written by Sophocles about Oedipus, the mythical king of Thebes (the others being *Antigone* and *Oedipus at Colonus*), known collectively as the Theban plays. Sophocles conceived each of these as a separate entity, and they were written and produced several years apart and out of chronological order. *Oedipus the King* follows the established formal structure and it is regarded as the best example of classical Athenian tragedy.

- ① A total of 123 tragedies were written by Sophocles.
 ② *Antigone* is also about the king Oedipus.
 ③ The Theban plays were created in time order.
 ④ *Oedipus the King* represents the classical Athenian tragedy.

It seems incredible that one man could be responsible for opening our eyes to an entire culture, but until British archaeologist Arthur Evans successfully excavated the ruins of the palace of Knossos on the island of Crete, the great Minoan culture of the Mediterranean was more legend than fact. Indeed its most famed resident was a creature of mythology: the half-man, half-bull Minotaur, said to have lived under the palace of mythical King Minos. But as Evans proved, this realm was no myth. In a series of excavations in the early years of the 20th century, Evans found a trove of artifacts from the Minoan age, which reached its height from 1900 to 1450 B.C.: jewelry, carvings, pottery, altars shaped like bull's horns, and wall paintings showing Minoan life.

Currency debasement of a good money by a bad money version occurred via coins of a high percentage of precious metal, reissued at lower percentages of gold or silver diluted with a lower value metal. This adulteration drove out the good coin for the bad coin. No one spent the good coin, they kept it, hence the good coin was driven out of circulation and into a hoard. Meanwhile the issuer, normally a king who had lost his treasure on interminable warfare and other such dissolute living, was behind the move. They collected all the good old coins they could, melted them down and reissued them at lower purity and pocketed the balance. It was often illegal to keep the old stuff back but people did, while the king replenished his treasury, at least for a time.

In spite of all evidence to the contrary, there are people who seriously believe that NASA's Apollo space program never really landed men on the moon. These people claim that the moon landings were nothing more than a huge conspiracy, perpetuated by a government desperately in competition with the Russians and fearful of losing face. ① These conspiracy theorists claim that the United States knew it couldn't compete with the Russians in the space race and was therefore forced to fake a series of successful moon landings. ② Advocates of a conspiracy cite several pieces of what they consider evidence. ③ Crucial to their case is the claim that astronauts never could have safely passed through the Van Allen belt, a region of radiation trapped in Earth's magnetic field. ④ They also point to the fact that the metal coverings of the spaceship were designed to block radiation. If the astronauts had truly gone through the belt, say conspiracy theorists, they would have died.

Tribal oral history and archaeological evidence suggest that sometime between 1500 and 1700 a mudslide destroyed part of the village, covering several longhouses and sealing in their contents.

From the village of Ozette on the westernmost point of Washington's Olympic Peninsula, members of the Makah tribe hunted whales. (①) They smoked their catch on racks and in smokehouses and traded with neighboring groups from around the Puget Sound and nearby Vancouver Island. (②) Ozette was one of five main villages inhabited by the Makah, an Indigenous people who have been based in the region for millennia. (③) Thousands of artifacts that would not otherwise have survived, including baskets, clothing, sleeping mats, and whaling tools, were preserved under the mud. (④) In 1970, a storm caused coastal erosion that revealed the remains of these longhouses and artifacts.

_____. Nearly every major politician hires media consultants and political experts to provide advice on how to appeal to the public. Virtually every major business and special-interest group has hired a lobbyist to take its concerns to Congress or to state and local governments. In nearly every community, activists try to persuade their fellow citizens on important policy issues. The workplace, too, has always been fertile ground for office politics and persuasion. One study estimates that general managers spend upwards of 80 % of their time in verbal communication — most of it with the intent of persuading their fellow employees. With the advent of the photocopying machine, a whole new medium for office persuasion was invented — the photocopied memo. The Pentagon alone copies an average of 350,000 pages a day, the equivalent of 1,000 novels.

- ① Business people should have good persuasion skills
 ② Persuasion shows up in almost every walk of life
 ③ You will encounter countless billboards and posters
 ④ Mass media campaigns are useful for the government

It is important to note that for adults, social interaction mainly occurs through the medium of language. Few native-speaker adults are willing to devote time to interacting with someone who does not speak the language, with the result that the adult foreigner will have little opportunity to engage in meaningful and extended language exchanges. In contrast, the young child is often readily accepted by other children, and even adults. For young children, language is not as essential to social interaction. So-called 'parallel play', for example, is common among young children. They can be content just to sit in each other's company speaking only occasionally and playing on their own. Adults rarely find themselves in situations where _____.

- ① language does not play a crucial role in social interaction
 ② their opinions are readily accepted by their colleagues
 ③ they are asked to speak another language
 ④ communication skills are highly required
